

IOT Relay User Manual

V1.9.8.1

1 Product Overview.....	.4
1.1 Overview.....	.4
1.2 Technical Parameters.....	.5
2 Image and Size.....	.6
2.1 Hardware version <3.x.x.....	.6
2.2 Hardware version >=V3.x.x.....	.7
2.3 Case.....	.8
3 Interface Description.....	.9
3.1 Power Supply.....	.9
3.2 Funcation.....	.10
3.3 Relay Contact.....	.11
3.4 Reset To Factory.....	.12
3.4.1 Hardware Version <V3.x.x.....	.12
3.4.2 Hardware Version >=V3.x.x.....	.13
3.5 Input Output and Power wiring diagram.....	.14
3.6 Add Spark killer and contractor.....	.15
4 Ethernet Web Page.....	.16
4.1 Login.....	.17
4.2 Setting Network.....	.17
4.3 Relay Connect.....	.18
4.4 Relay CGI Test.....	.21
4.5 Relay Task.....	.21
4.6 Input.....	.22
4.7 Input Link Relay.....	.23
4.8 IP WatchDog.....	.23
4.9 Reset User.....	.24
4.10 To Factory.....	.24
4.11 Reboot.....	.25
5 WIFI web Page.....	.26
5.1 Login.....	.26
5.2 Setting WIFI.....	.26
5.3 Setting Relay Connect.....	.27
5.4 Relay CGI Test.....	.30
5.5 Relay Task.....	.31
5.6 Input.....	.31
5.7 Input Link Relay.....	.32
5.8 IP WatchDog.....	.32
5.9 Reset User.....	.33
5.10 To Factory.....	.33
6 IP Finder.....	.34

6.1 Search Device.....	35
6.2 Change Static IP.....	36
Appendix I How to Test Command.....	37
step 1: download SDK.....	37
step 2: Change NetAssist language.....	38
step 3: Control relay via NetAssist network tool by wifi module.....	39
step 4: open UDP listen.....	41
step 5: control relay via wifi module.....	42
Appendix II How to use Domoticz.....	43
step 1: install Dingtian plugin to Domoticz.....	43
1 Stop Domoticz.....	43
2 Copy Domoticz_plugins\dingtian to Domoticz plugin dir.....	43
step 2: config Dingtian Relay board.....	44
Domoticz Ethernet.....	44
Domoticz WIFI.....	45
step 3: Add Dingtian Relay to Domoticz.....	46
1 Install Python 3.8.2.....	46
2 Run to Domoticz.....	46
3 Add Dingtian Relay to Domoticz.....	47
4 Control Dingtian Relay with Domoticz.....	52
step 4: Domoticz mobile application.....	54
1 Set the Location, User name and password on PC Domoticz.....	54
2 Install Domoticz.....	54
3 Set Domoticz Server parameter.....	55
Appendix III How to MQTT.....	56
step 1: Install and config Broker.....	61
step 2: Install MQTT PC client.....	61
step 3: MQTTBox Add Client.....	61
step 4: MQTTBox Publish topic to relay board and subscribe topic.....	63
Appendix IV How to CoAP.....	64
step 1: compile libcoap.....	64
step 2: CoAP Get relay status.....	64
step 3: CoAP Control relay(simple).....	64
step 4: CoAP Control relay.....	65
Appendix V How to “input mutual control”.....	67
Appendix VI How to Home Assistant.....	69
Step 1 config Relay board.....	69
Step 2 Install MQTT Broker.....	70
Step 3 Install Home Assistant.....	70
1 install python.....	70
2 install Home Assistant.....	70
3 Add relay board Switch and input to Home Assistant.....	70
4 Home Assistant config MQTT Broker.....	72
Appendix VII How to openHAB.....	76

Step 1 config Relay board.....	76
Step 2 Install MQTT Broker.....	77
Step 3 install JDK and openHAB.....	77
1 Download.....	77
2 install.....	78
3 Add jdk directory to “start.bat”	79
4 First time init openHAB.....	80
Step 4 Add Dingtian Relay board to openHAB.....	83
1 Change json MQTT broker host, username,password.....	83
2 Change json SN(example SN 7920) to you relay board SN.....	83
3 Cover openHAB json.....	87
4 Control relay board with openHAB.....	87

1 Product Overview

1.1 Overview

Support Ethernet, WiFi, RS485, CAN
10/100Mbps ethernet, Auto-MDIX,DHCP ip,Static IP
WiFi 802.11 b/g/n, MAX 150Mbps
Digital input, can be Local Button control(SelfLock/Jogging/Delay)
Support RELAY On/OFF/Jogging/Delay.
Support HTTP GET CGI, UDP, TCP Server, TCP Client
Support Modbus-RTU/ASCII/TCP/UDP/WIFI
Support Modbus-RTU Over TCP/UDP/WIFI
Support Modbus-ASCII Over TCP/UDP/WIFI
Support WEB control
Support MQTT, CoAP
Support NTP, IP Watchdog, Task timer
Support Domoticz, Home Assistant, openHAB

Home Automation System Support:

Name	How to
Domoticz	Appendix II How to use Domoticz https://github.com/dtlzp/Domoticz-Dingtian-Relay-Plugin Software version <=V2.16.xx, please use V1.1 for github software version >=V2.17.xx, please use V1.2 for github
Home Assistant	Appendix VI How to Home Assistant
openHAB	Appendix VII How to openHAB

Notice:

- 1 Close your firewall
- 2 All command and script run as root/administrator

SDK download link:

http://www.dingtian-tech.com/sdk/relay_sdk.zip

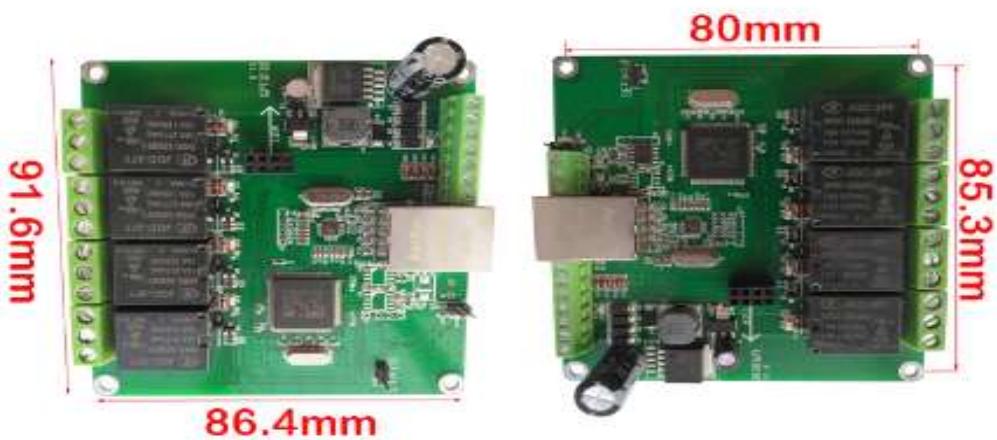

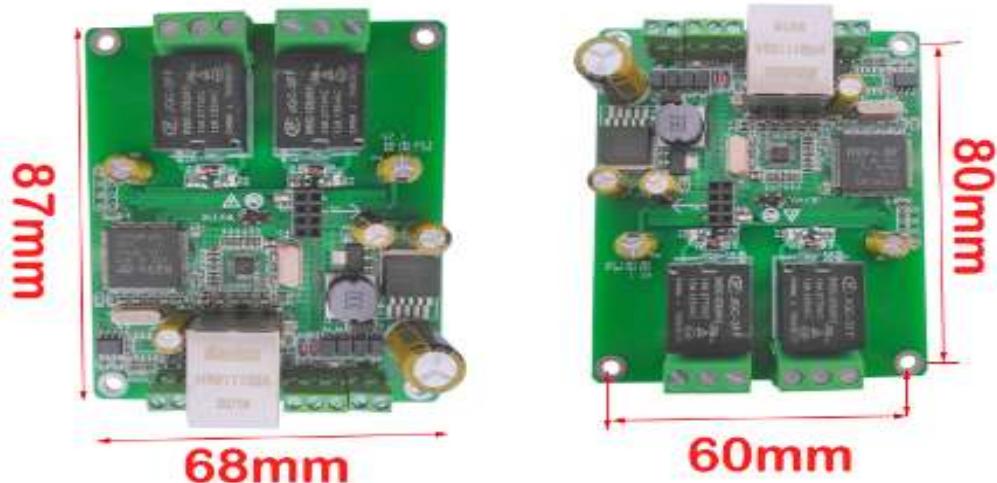

1.2 Technical Parameters

Function	Interface	RJ45/ RS485/CAN/WIFI
	Baudrate	100M/115200bps/125kbps/150Mbps
	Protocol	TCP server/client, UDP HTTP GET CGI, Modbus-RTU/ASCII/TCP/UDP/WIFI Modbus-RTU Over TCP/UDP/WIFI Modbus-ASCII Over TCP/UDP/WIFI MQTT CoAP
	Home Automation System	Domoticz Home Assistant openHAB
	Others	NTP IP Watchdog Task timer
Output	Relay Power	AC 250V/10A,DC 30V/10A
	Contacts	Normally Close(NC) Normally Open(NO)
	Delay	1~65535 seconds
	Momentary	Pull in 0.5 seconds, automatically release
Temperature and Humidity	Storage temperature	-40°C to +70°C
	Operating temperature	-20°C to +70°C
	Relative humidity (during operation)	25°C @ ≤95%, no condensation
Power	Power Specifications	12/24VDC(recommend) 12/24VAC
	Current	2 channel: 0.15A/12V(recommend 1A/12V) 4 channel: 0.25A/12V(recommend 1A/12V) 8 channel: 0.5A/12V(recommend 2A/12V)
	Power consumption	2 channel: 2W 4 channel: 3W 8 channel: 5W

2 Image and Size

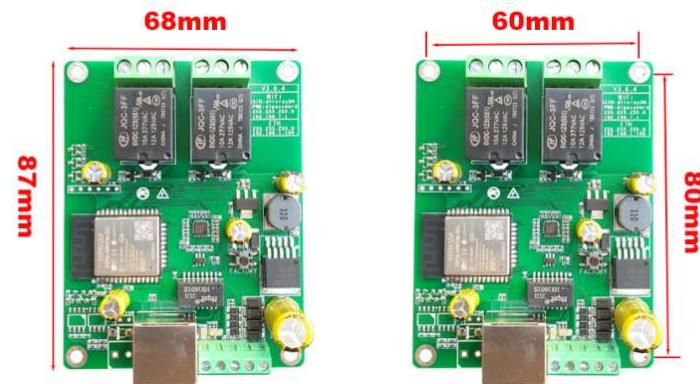

2.1 Hardware version <3.x.x

Hole size: 3.5mm

2.2 Hardware version >=V3.x.x

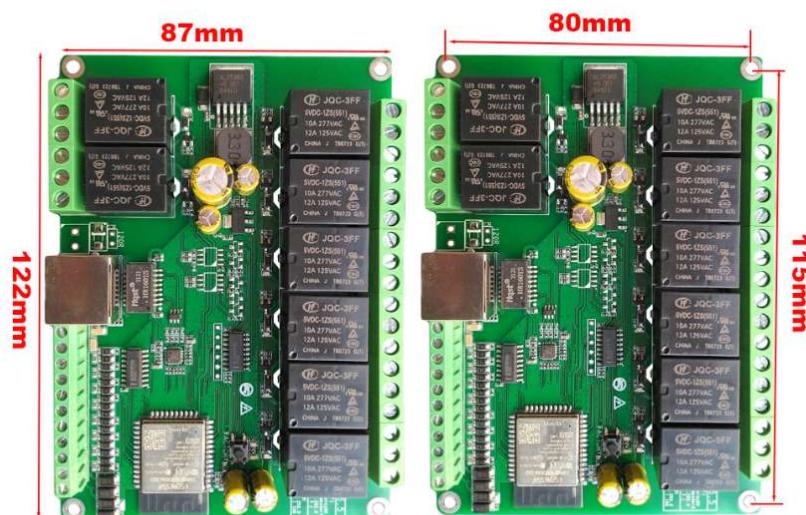

Hole size: 3.5mm

2CH relay board
Size of relay: 87*68mm
Distance of hole: 80*60mm

4CH relay board
Size of relay: 91.6*86.4mm
Distance of hole: 85.3*80mm

8CH relay board
Size of relay: 122*87mm
Distance of hole: 115*80mm

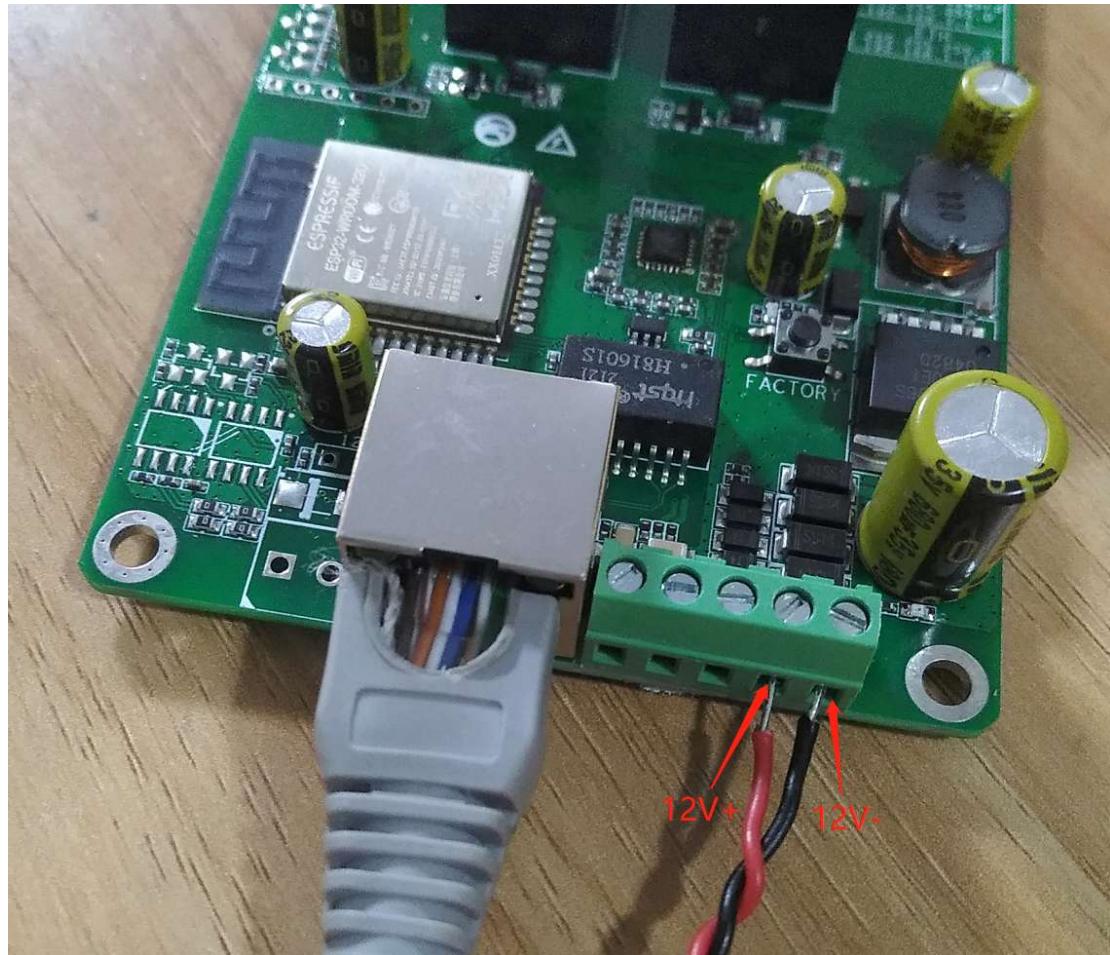

2.3 Case

The 2CH,4CH,8CH Case is ABS material, Standard DIN35 rail installation

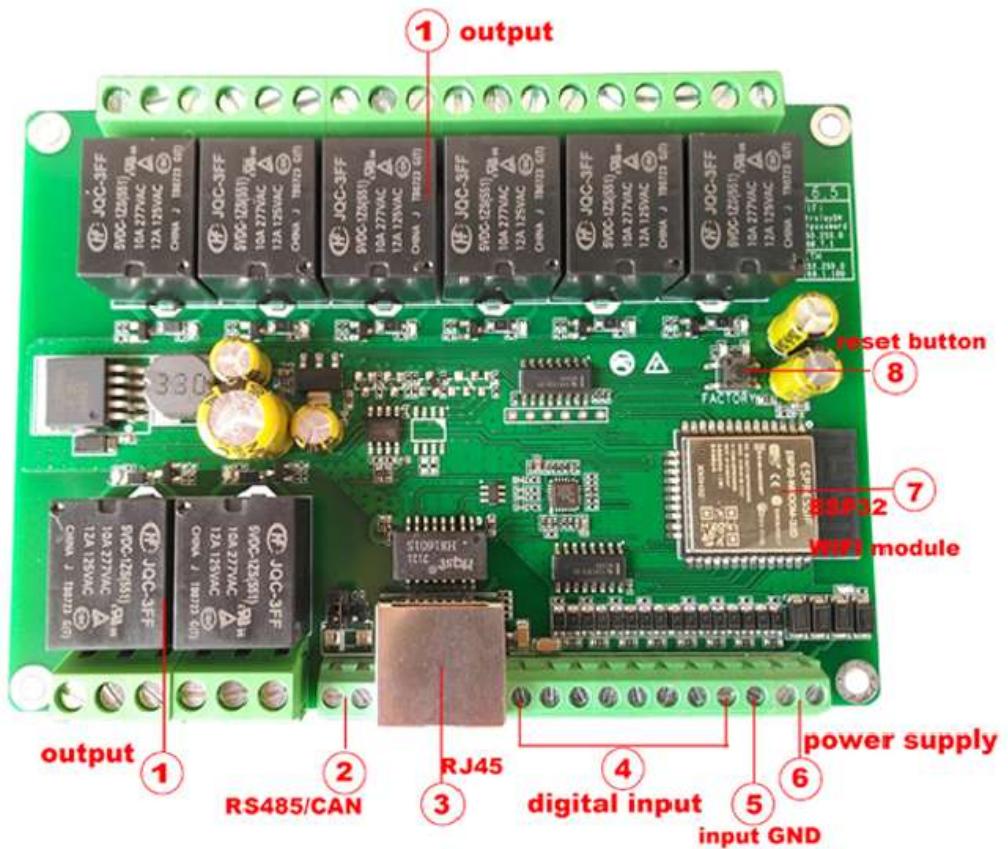

3 Interface Description

3.1 Power Supply

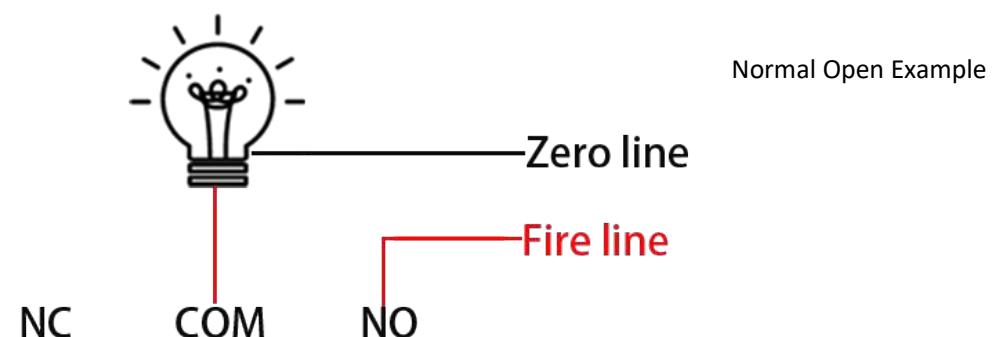

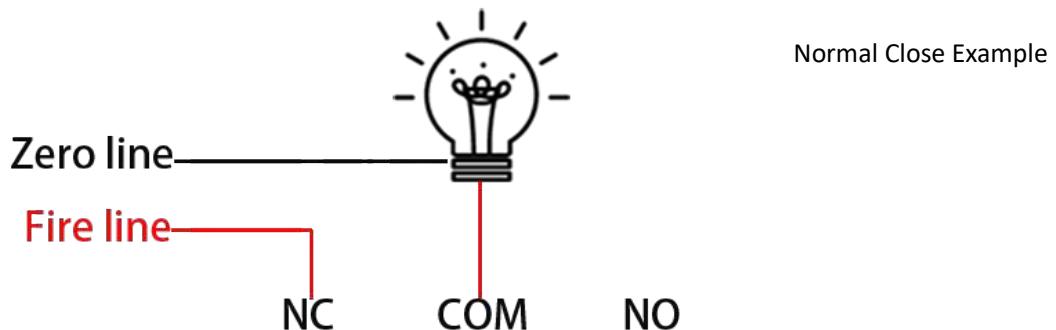

3.2 Funcation

3.3 Relay Contact

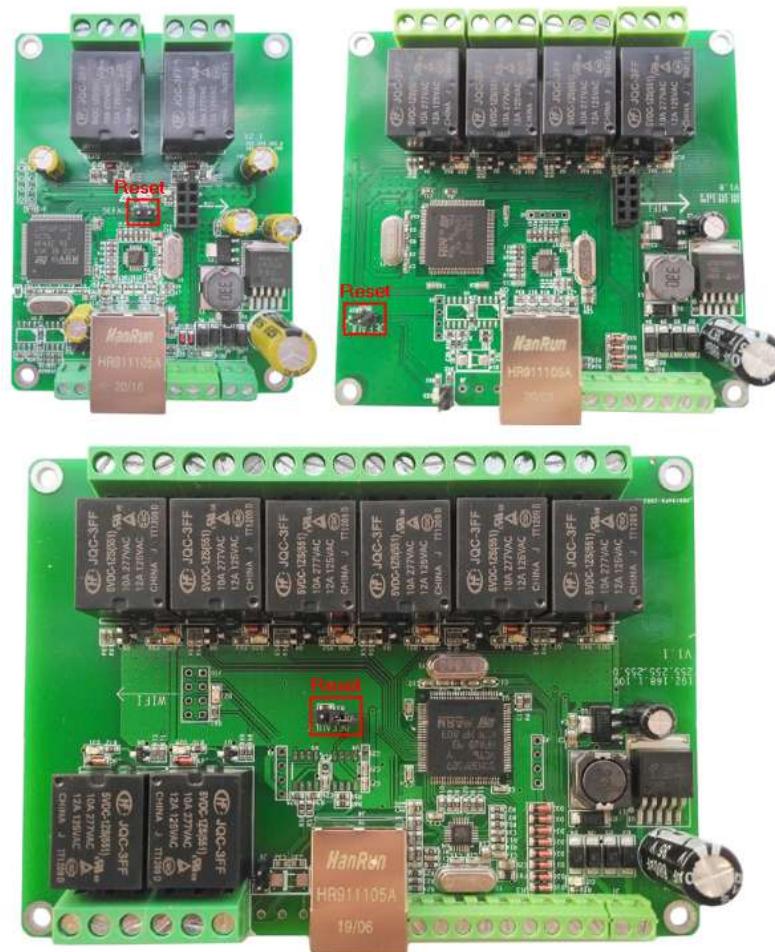

Connect Example:

3.4 Reset To Factory

3.4.1 Hardware Version <V3.x.x

1. Short-circuit the 2 pin headers under the Default assembly with a jumper cap

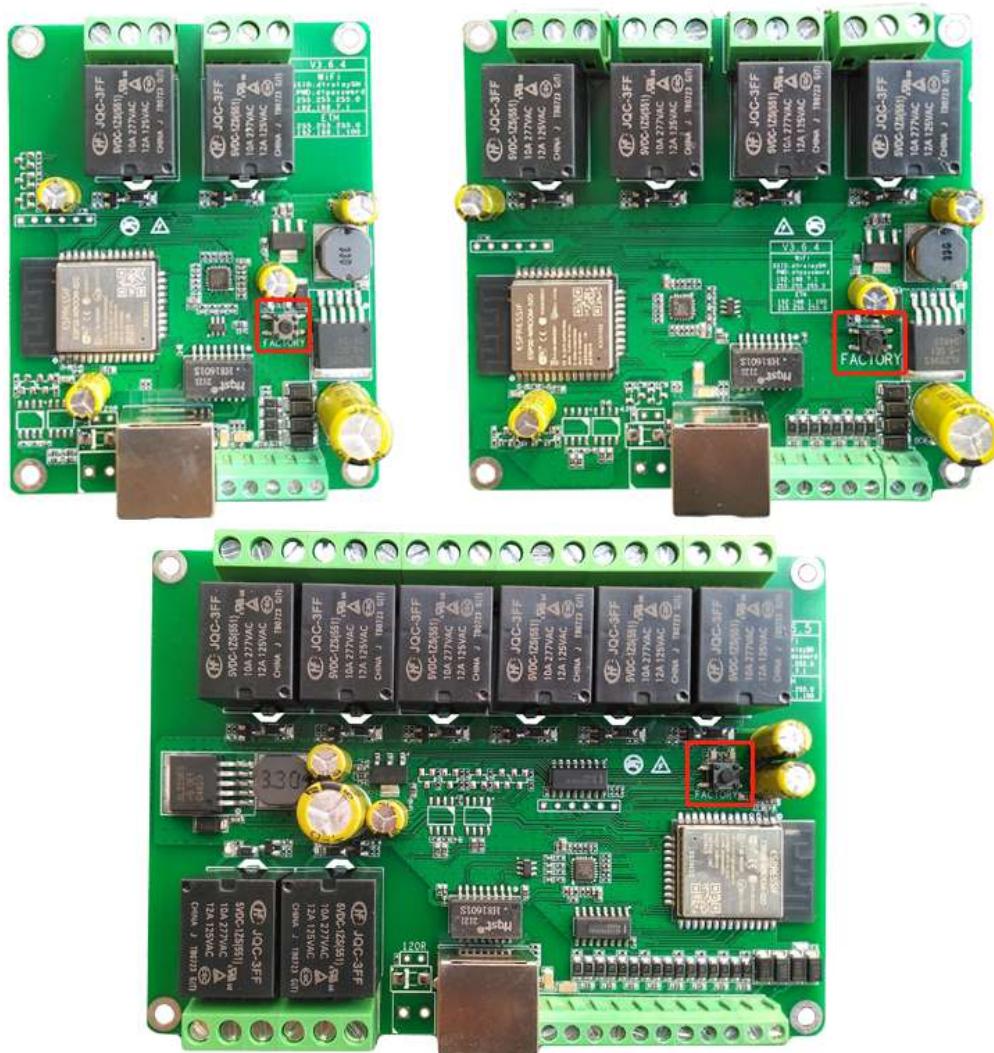

2 Power off the relay board

3 Power on the relay board

4 Pull out the Default jumper cap

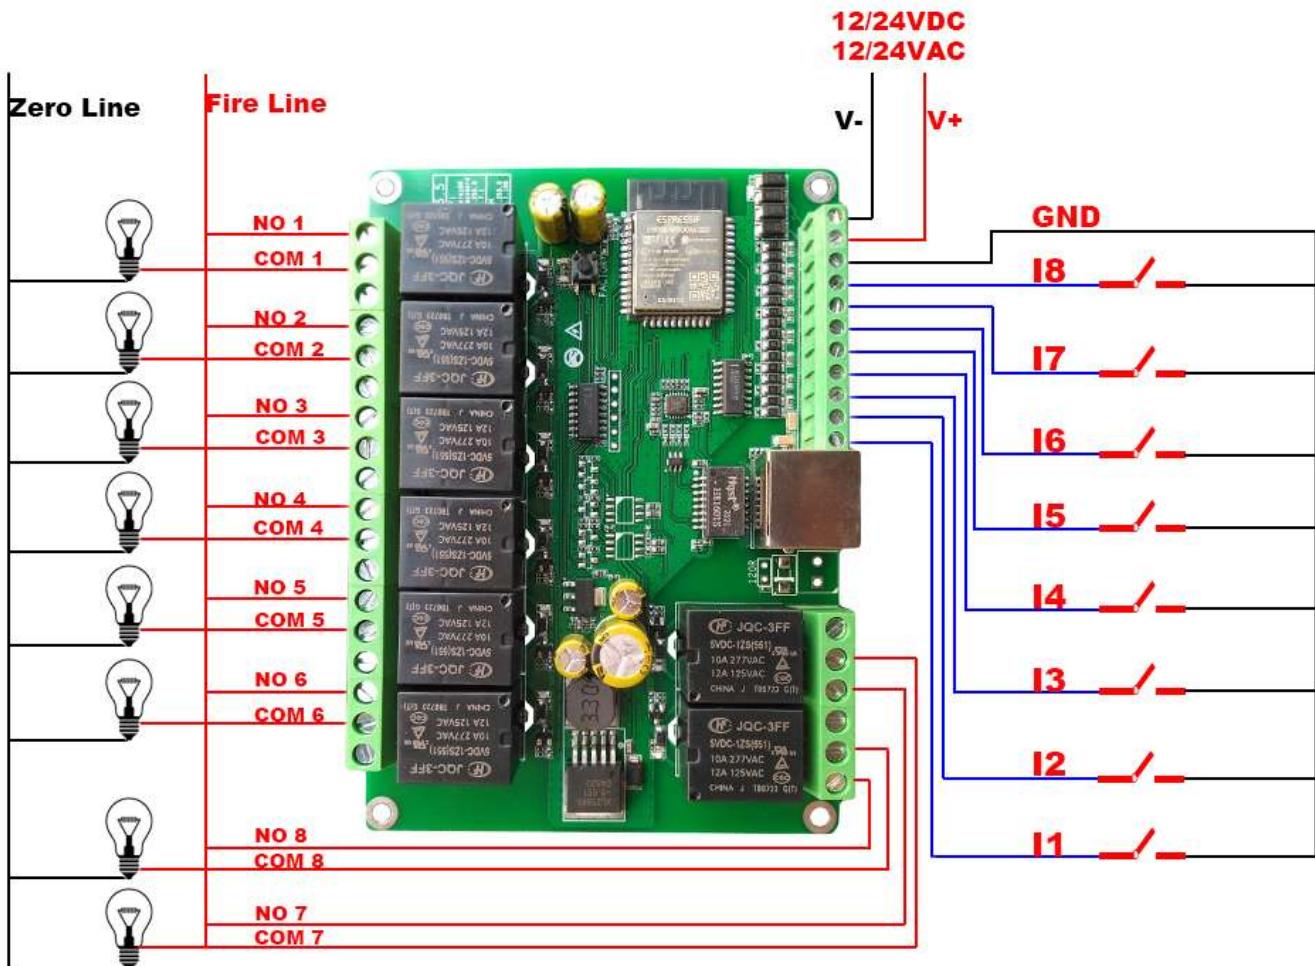

3.4.2 Hardware Version >=V3.x.x

- 1 power on relay board,wait 10 second
- 2 press “FACTORY” button(left light will ON)
- 3 wait 5 second(right light will ON)
- 4 release “FACTORY” button
- 5 relay board will reset all parameter to factory.

3.5 Input Output and Power wiring diagram

	LOW	HIGH
Hardware Version < V1.8	0V	3.3V
Hardware Version >= V1.8	0V	3.3V~24V

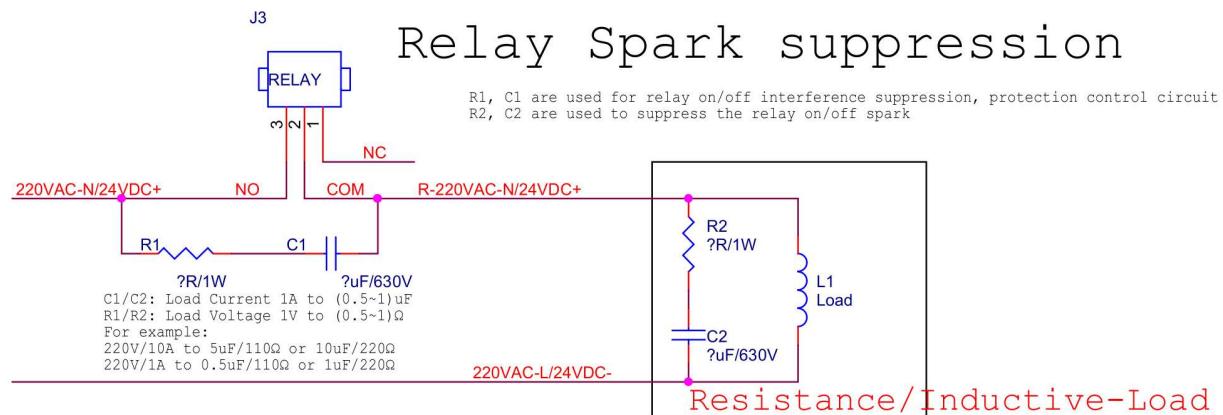

3.6 Add Spark killer and contractor

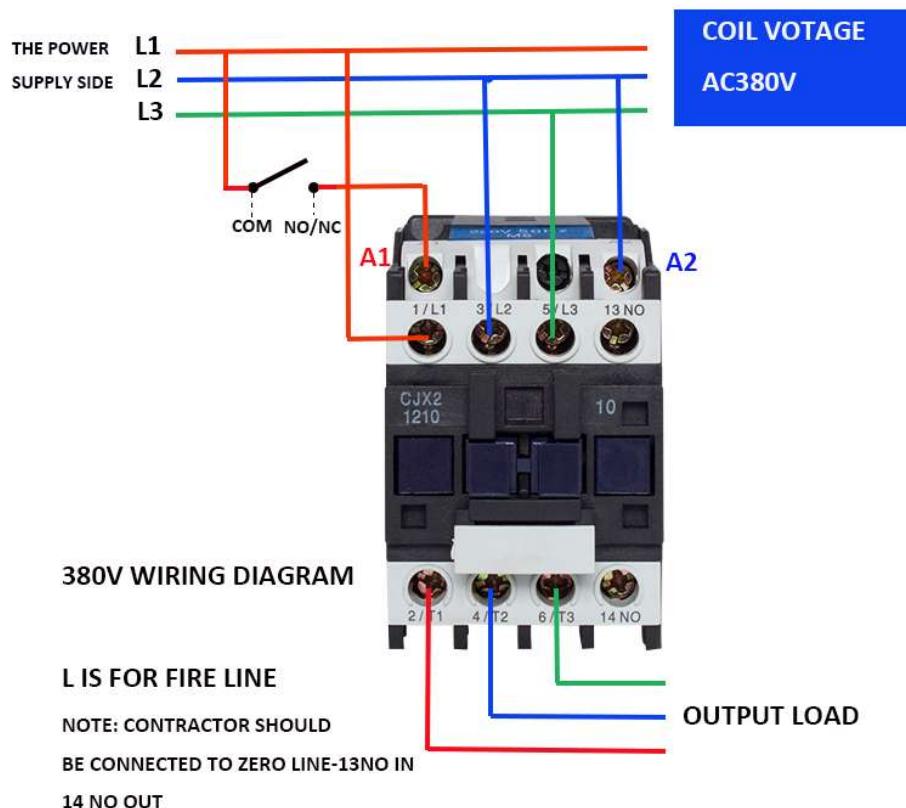

R1,C1 are used for relay on/off interference suppression, protection control circuit

R2,C2 are used to suppress the Load spark and noise when relay ON/OFF

Most of time the Load comes with the best R2+C2, so we don't need care R2 and C2

Our max current is 10A, if the current of your device is too big, suggest add a contractor

4 Ethernet Web Page

IE is not support, please use firefox and chrome

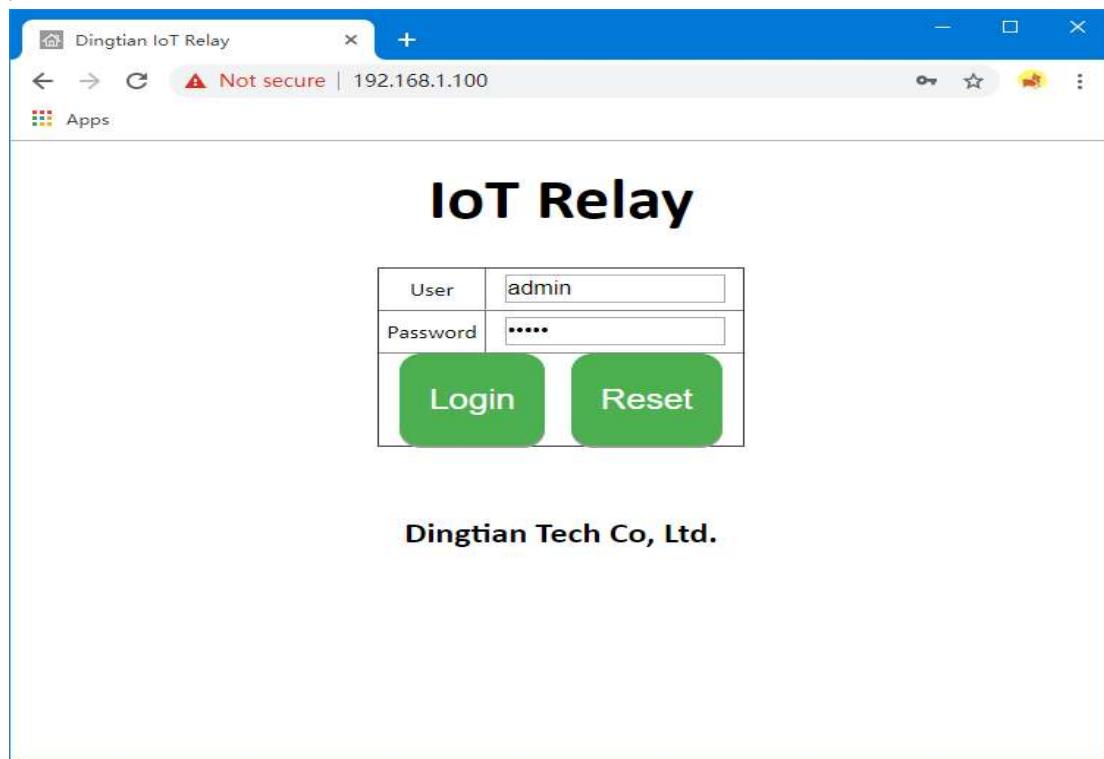

4.1 Login

Default IP: 192.168.1.100

user: admin

password: admin

4.2 Setting Network

Set network information, NTP Server on Relay setting page
after click "Save" button, device well reboot

Parameter:

Software Version: Relay board firmware version

Model:

2CH is Dingtian IOT RELAY-2

4CH is Dingtian IOT RELAY-4

8CH is Dingtian IOT RELAY-8

Serial Number: Relay board Serial Number

Date Time: current date and time(**Need internet because of NTP**)

NTP Server: NTP server get time from, suggest use pool.ntp.org

DHCP: Ethernet IP DHCP or Static

IP: Ethernet current IP Address

Netmask: Ethernet current Netmask

Gateway: Ethernet current Gateway

DNS: Ethernet current DNS Server

MAC: Ethernet current MAC address

Dingtian IOT Relay

Setting

Hardware Version	V1.4
Software Version	V2.17.28
Build Date	2021-01-21 21:23:13
Model	Dingtian IOT RELAY-8
Serial Number	1868
Date Time	1/28/2021, 23:31:43
NTP Server	pool.ntp.org
Hostname	Dingtian-Relay1868
Hostname+Suffix	Dingtian-Relay
HTTP Server Port	80
DHCP	No
IP	192.168.1.100
Netmask	255.255.255.0
Gateway	192.168.1.1
DNS	192.168.1.1
MAC	bc:34:88:00:06:9d
WiFi AP IP	192.168.7.1
WIFI STA IP	192.168.1.97

Save

4.3 Relay Connect

Set control interface parameter of relay board on the Relay connect page and test relay

After click "Save" button, device will reboot

Protocol refers to [programming manual_en.pdf](#)

Channel Parameter:

RS485: RS485 protocol, addr, baudrate, databits, stopbits, parity config

Protocol:

Dingtian String

Dingtian Binary

Modbus-RTU

Modbus-ASCII

Baudrate:

1200bps,2400bps,4800bps,9600bps,19200bps,38400bps,57600bps,115200bps

CAN: CAN protocol, ID, Speed config

Protocol:

Dingtian String

Dingtian Binary

Modbus-RTU(0x03,0x06),only support Read/Write single register once time

Speed:

5Kbps,10Kbps,20Kbps,25Kbps,50Kbps,100Kbps,125Kbps,200Kbps,250Kbps,500Kbps,800Kbps,888 Kbps,1Mbps

ETH-UDP1: Ethernet UDP1 protocol, Remote Server Address,Remote Server Port,Local Port config

Protocol:

Dingtian String

Dingtian Binary

Modbus-RTU Over UDP

Modbus-ASCII Over UDP

Modbus-UDP

CoAP(**need change port to 5683**)

Input Mutual Control

ETH-UDP2: Ethernet UDP2 protocol, Remote Server Address,Remote Server Port,Local Port config

Protocol:

Dingtian String

Dingtian Binary

Modbus-RTU Over UDP(use RS485 addr)

Modbus-ASCII Over UDP(use RS485 addr)

Modbus-UDP

CoAP(**we suggest enable CoAP at ETH/WiFi-UDP2**)

Input Mutual Control

ETH-TCP Server: Ethernet TCP Server protocol, Local Port config

Protocol:

Dingtian String

Dingtian Binary

Modbus-RTU Over TCP(use RS485 addr)

Modbus-ASCII Over TCP(use RS485 addr)

Modbus-TCP

ETH-TCP Client: Ethernet TCP Client protocol, Remote Server Address,Remote Server Port config

Protocol:

Dingtian String

Dingtian Binary

Modbus-RTU Over TCP(use RS485 addr)

Modbus-ASCII Over TCP(use RS485 addr)

Modbus-TCP

ETH-MQTT: Ethernet MQTT protocol, Broker Address, Broker Port, Broker Username, Broker

Password config

Protocol:

MQTT(without tls)

Other Parameter:

Relay Password: use for checking control is valid, only correct password control relay board

Keep Alive Second: send relay status to server with every “Keep Alive Second”, **only protocol Dingtian String and Dingtian binary have Keep Alive Second**

Jogging Time: Jogging time, default is 500ms,1=100ms

what is Jogging: ON then delay 500ms OFF,or OFF then delay 500ms ON,

Power Failure Recovery Relay: relay status will restore after re-power

Input Control Relay: Input link relay output

Button Type Parameter:

Selflock: Connect **Selflock Button**,

press button relay ON,release button relay OFF

Jogging: Connect **Momentary Button**,

press and release button relay Jogging(ON and delay 500ms OFF)

Momentary: Connect **Momentary Button**,

press and release button relay ON,press and release button relay OFF

How to Connect button please move to 3.5

The screenshot shows the 'Dingtian IOT Relay' configuration interface. On the left is a sidebar with a 'Setting' menu. The main area is titled 'Relay' and contains several configuration sections:

- Relay Connect:** A table for setting up various communication channels (RS485, CAN, ETH-UDP1, ETH-UDP2, ETH-TCP Server, ETH-TCP Client, ETH-MQTT) with their respective protocols, addresses, and port numbers.
- Other:** Settings for 'Relay Password' (0-9999), 'Keep Alive Second' (30-120 seconds), 'Jogging Time' (5-255 ms), 'Power Failure Recovery Relay' (No or Yes), and 'Input Control Relay' (Yes or No).
- Button Type:** A section where users can select the type of button for each of the eight relays (Relay1-Relay8).
- Save:** A large green 'Save' button at the bottom of the configuration section.
- Relay Test:** A section at the bottom containing eight green buttons labeled 'Relay1:On', 'Relay2:On', 'Relay3:On', 'Relay4:On', 'Relay5:On', 'Relay6:On', 'Relay7:On', and 'Relay8:On'. Each button has a small diamond icon next to it.

4.4 Relay CGI Test

relay CGI test

The screenshot shows the 'Dingtian IOT Relay' web interface. On the left, a sidebar menu includes 'Setting', 'Relay Connect', 'Relay CGI Test' (which is highlighted with a red box), 'Relay Task', 'Input', 'Input Link Relay', 'IP WatchDog', 'Reset User', 'To Factory', and 'Reboot'. The main content area is titled 'Relay CGI Test' and contains a table with 8 rows. Each row has columns for 'Relay' (1-8), 'Status' (On/Off), 'Jogging(1~255 100ms)', 'Delay(1~65535 Second)', 'On/Off' (dropdown), 'Jogging' (dropdown), and 'Delay' (dropdown). Below the table, a message says 'Relay CGI load success!'. The URL in the browser is 'Not secure | 192.168.1.100'.

4.5 Relay Task

Choose "Repeat", you can ask repeat by second/minute/hour/day/week/month

The screenshot shows the 'Dingtian IOT Relay' web interface. The sidebar menu is identical to the previous screenshot. The main content area is titled 'Relay Task' and contains a table with 5 rows. Each row has columns for 'Task' (1-5), 'Enable' (Yes/No dropdown), 'Relay Mode' (1 dropdown), 'On/Off/Delay/Jogging' (dropdown), and 'Repeat' (dropdown). The 'Repeat' dropdown for row 1 is open, showing options: 'No', 'Second', 'Minute', 'Hour', 'Day', 'Week', and 'Month'. To the right of the table is a section titled 'Relay task begin time' with a grid for setting the start time for each day of the week. The URL in the browser is 'Not secure | 192.168.1.100/menu_page.html'.

4.6 Input

4.7 Input Link Relay

Select R1~R8, means you add the relay to link with Input, Click the green button R1~R8 means delete relay

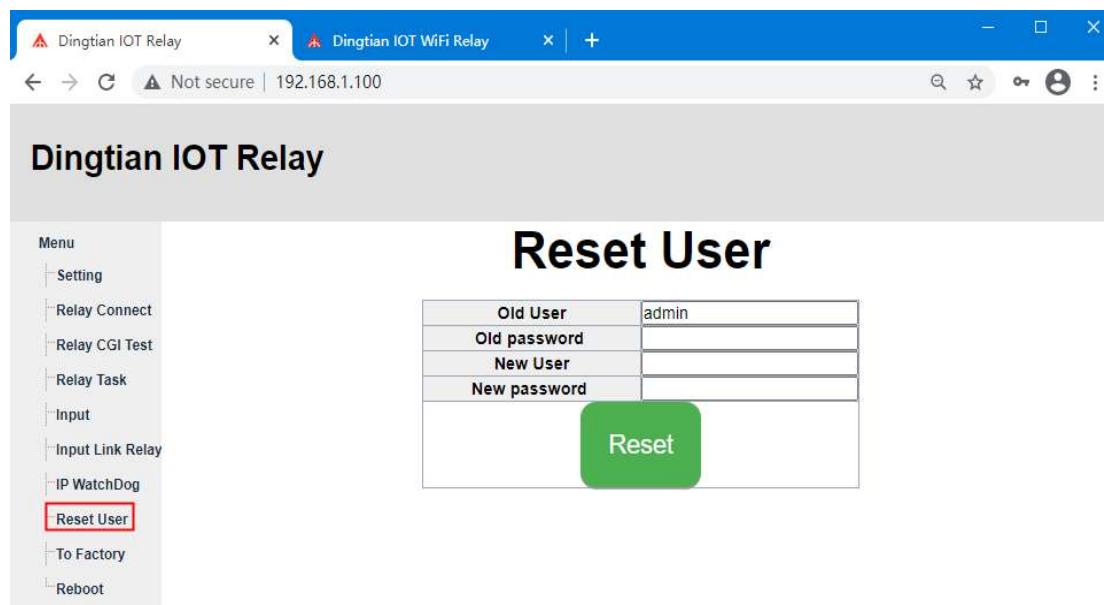

The screenshot shows the 'Input Link Relay' configuration page. On the left is a sidebar menu with options like Setting, Relay Connect, Relay CGI Test, Relay Task, Input, and **Input Link Relay**, which is highlighted with a red box. The main area has a title 'Input Link Relay' and a subtitle 'How to: Select Add/Click Delete'. Below this is a table with 8 rows (I1 to I8) and 5 columns (ON (Action ON), ON (Action OFF), OFF (Action ON), OFF (Action OFF), and a column for selecting relays R1-R8). A large green 'Save' button is at the bottom, and a message 'load success!' is displayed below it.

4.8 IP WatchDog

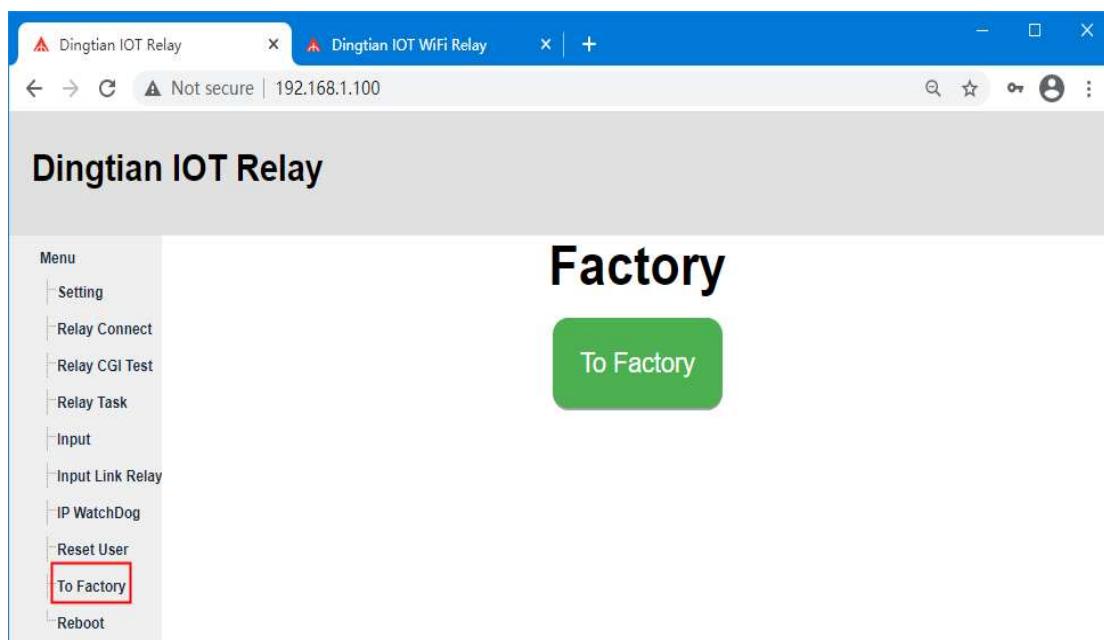

When Enable IP WatchDog function, all relay ON, when the "Watch IP" offline, relay OFF, after seconds, the relay ON automatically, **"Ping Interval"** must be bigger than **"Ping Timeout"**

The screenshot shows the 'IP WatchDog' configuration page. The sidebar menu includes **IP WatchDog**, which is highlighted with a red box. The main area has a title 'IP WatchDog' and a subtitle 'Off Relay: Select Add/Click Delete' and 'Ping Interval Must Greater than Ping Timeout'. Below this is a table with 9 rows (1 to 9) and columns for WatchDog status, enable/disable, relay selection, Watch IP, and various timeout/ping parameters. A large green 'Save' button is at the bottom, and a message 'load success!' is displayed below it.

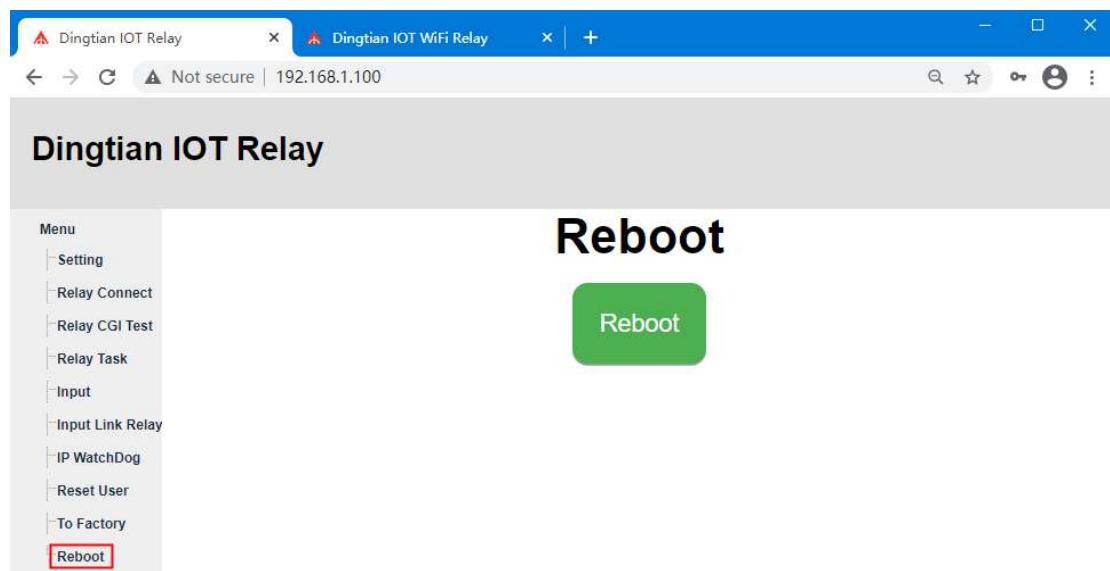

4.9 Reset User

4.10 To Factory

4.11 Reboot

5 WIFI web Page

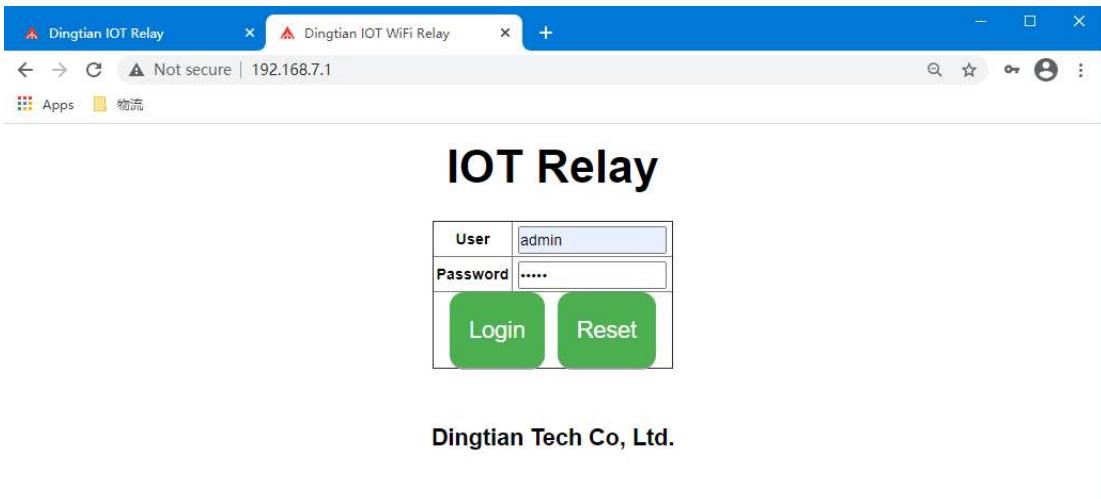

IE is not support, please use firefox and chrome

5.1 Login

Default IP: 192.168.7.1

user:admin

password:admin

5.2 Setting WIFI

Set WIFI information, NTP Server and STA WiFi SSID and password on WIFI Relay setting page

After click "Save" button, device will reboot

Parameter:

Software Version: Relay board firmware version

Model:

2CH is Dingtian IOT WRELAY-2

4CH is Dingtian IOT WRELAY-4

8CH is Dingtian IOT WRELAY-8

Serial Number: Relay board Serial Number

Date Time: current date and time(**Need internet because of NTP**)

NTP Server: NTP server get time from, suggest use pool.ntp.org

STA WiFi SSID: Your Router WiFi Name, Relay board will access to your router

STA WiFi Password: Your Router WiFi Password, Relay board will access to your router

STA IP: Relay board get IP from your Router

Netmask: WIFI Netmask

Gateway: WIFI Gateway

DNS: WIFI DNS Server

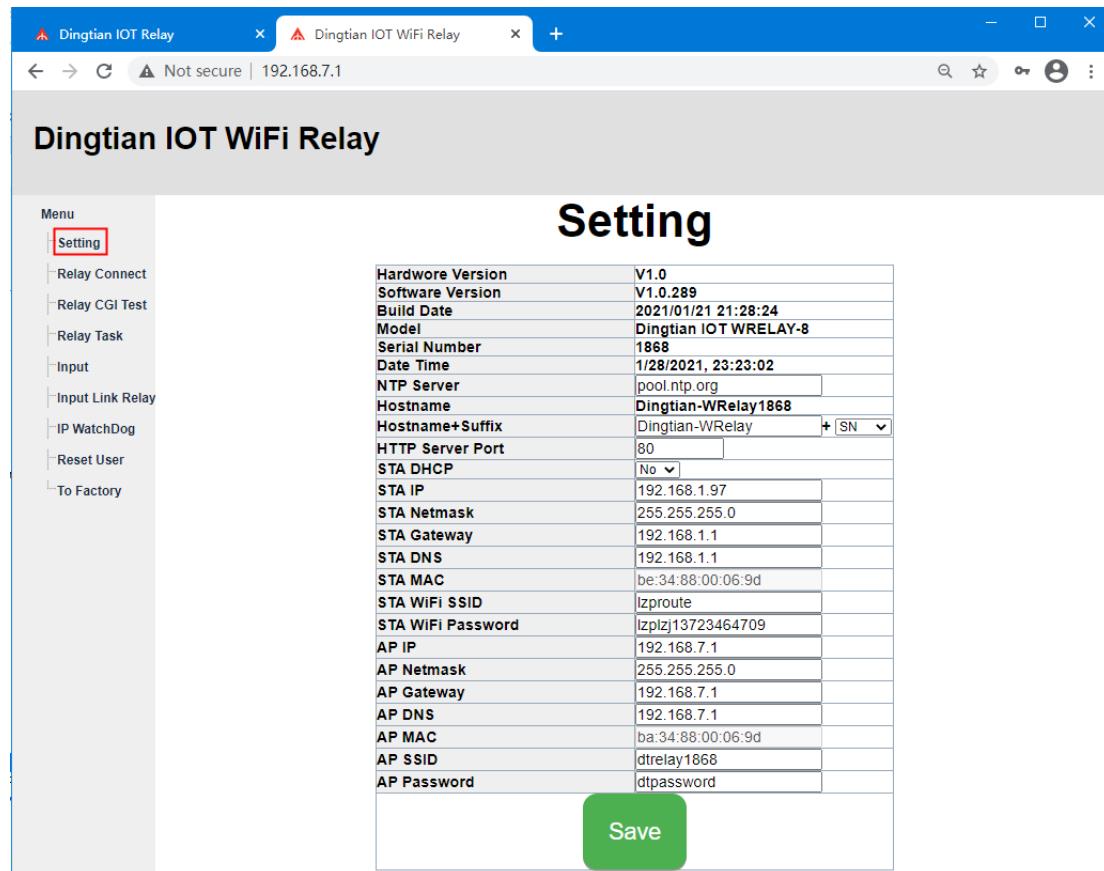

MAC: WIFI MAC address

AP IP: WIFI default address

AP SSID: WIFI default name, as a router, we need to connect the WIFI with your computer firstly and access the wifi web

AP Password: WIFI default Password

we can use STA IP or AP IP to control relay board via WIFI, only accept to use one browser(Firefox or Chrome) to access.

5.3 Setting Relay Connect

WIFI-UDP1: WIFI UDP1 protocol, Remote Server Address,Remote Server Port,Local Port config

Protocol:

Dingtian String

Dingtian Binary

Modbus-RTU Over UDP(use RS485 addr)

Modbus-ASCII Over UDP(use RS485 addr)

Modbus-UDP

CoAP(**need change port to 5683**)

Input Mutual Control

WIFI-UDP2: WIFI UDP2 protocol, Remote Server Address,Remote Server Port,Local Port config

Protocol:

Dingtian String

Dingtian Binary

Modbus-RTU Over UDP(use RS485 addr)

Modbus-ASCII Over UDP(use RS485 addr)

Modbus-UDP

CoAP(**we suggest enable CoAP at ETH/WiFi-UDP2**)

Input Mutual Control

WIFI-TCP Server: WIFI TCP Server protocol, Local Port config

Protocol:

Dingtian String

Dingtian Binary

Modbus-RTU Over TCP(use RS485 addr)

Modbus-ASCII Over TCP(use RS485 addr)

Modbus-TCP

WIFI-TCP Client: WIFI TCP Client protocol, Remote Server Address,Remote Server Port config

Protocol:

Dingtian String

Dingtian Binary

Modbus-RTU Over TCP(use RS485 addr)

Modbus-ASCII Over TCP(use RS485 addr)

Modbus-TCP

WIFI-MQTT: WIFI MQTT protocol, Broker Address, Broker Port, Broker Username, Broker Password config

Protocol:

MQTT(without tls)

Other Parameter:

Relay Password: use for checking control is valid, only correct password control relay board

Keep Alive Second: send relay status to server with every "Keep Alive Second", **only protocol**

Dingtian String and Dingtian binary have Keep Alive Second

Jogging Time: Jogging time, default is 500ms,1=100ms

what is Jogging: ON then delay 500ms OFF,or OFF then delay 500ms ON

Dingtian IOT WiFi Relay

Not secure | 192.168.7.1

Relay5:Off Relay6:Off Relay7:Off Relay8:Off

5.4 Relay CGI Test

The screenshot shows a web browser window titled "Dingtian IOT WiFi Relay". The address bar indicates the URL is "Not secure | 192.168.7.1". The left sidebar contains a "Menu" with the following items: Setting, Relay Connect, **Relay CGI Test** (which is highlighted with a red border), Relay Task, Input, Input Link Relay, IP WatchDog, Reset User, and To Factory.

The main content area is titled "Relay CGI Test" and includes a "Relay Password" input field set to "0 (0~9999)". Below this is a table with 8 rows, each representing a relay channel (1 through 8). Each row has columns for "Relay Status" (Off), "Jogging(1~255 100ms)" (dropdown set to On, value 5, 500ms), "Delay(1~65535 Second)" (dropdown set to On, value 5, second), and "On/Off" (dropdown set to On). The last three columns are labeled "Jogging", "Do On", "Do Jogging", "Do Delay", "Do On", "Do Jogging", "Do Delay", and "Do On", "Do Jogging", "Do Delay" respectively. All cells in the "Do" column are green.

At the bottom of the table, a message reads "Relay CGI load success!"

5.5 Relay Task

Choose “Repeat”, you can ask repeat by second/minute/hour/day/week/month

The screenshot shows the 'Relay Task' configuration page. On the left is a sidebar menu with options like Setting, Relay Connect, Relay CGI Test, Relay Task (which is highlighted with a red box), Input, Input Link Relay, IP WatchDog, Reset User, and To Factory. The main area is titled 'Relay Task' and contains a table with 6 rows for tasks. Each row has columns for Task ID, Enable, Relay Mode, On/Off/Delay/Jogging, Repeat (with dropdown options: No, Second, Minute, Hour, Day, Week, Month), Week (with days: SUN MON TUE WED THU FRI SAT), and a detailed schedule table for Month, Day, Hour, Minute, Second, and Interval. The 'Repeat' column for task 1 is highlighted with a red box.

5.6 Input

The screenshot shows the 'Input' test results page. The sidebar menu includes Setting, Relay Connect, Relay CGI Test, Relay Task, Input (highlighted with a red box), Input Link Relay, IP WatchDog, Reset User, and To Factory. The main area displays a table titled 'Input Test' with columns for numbers 1 through 8. Below the table, the word 'success!' is displayed. The 'Input' option in the sidebar is highlighted with a red box.

5.7 Input Link Relay

Select R1~R8, means you add the relay to link with Input, Click the green button R1~R8 means delete relay

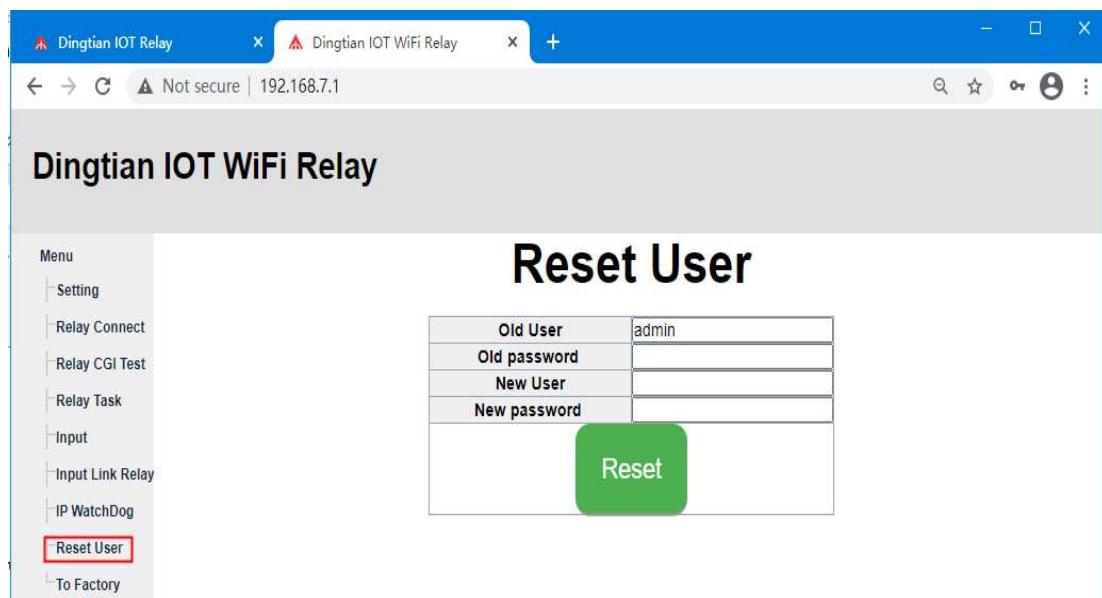

The screenshot shows the 'Input Link Relay' configuration page. On the left, a sidebar menu includes 'Setting', 'Relay Connect', 'Relay CGI Test', 'Relay Task', 'Input', 'Input Link Relay' (which is highlighted with a red box), 'IP WatchDog', 'Reset User', and 'To Factory'. The main area is titled 'Input Link Relay' and contains a table with 18 rows (I1 to I8) and 8 columns (Action ON, R1, Action OFF, R1, Action ON, R1, Action OFF, R1). Below the table is a note: 'How to: Select Add/Click Delete'. A large green 'Save' button is centered at the bottom, and a message 'load success!' is displayed below it.

5.8 IP WatchDog

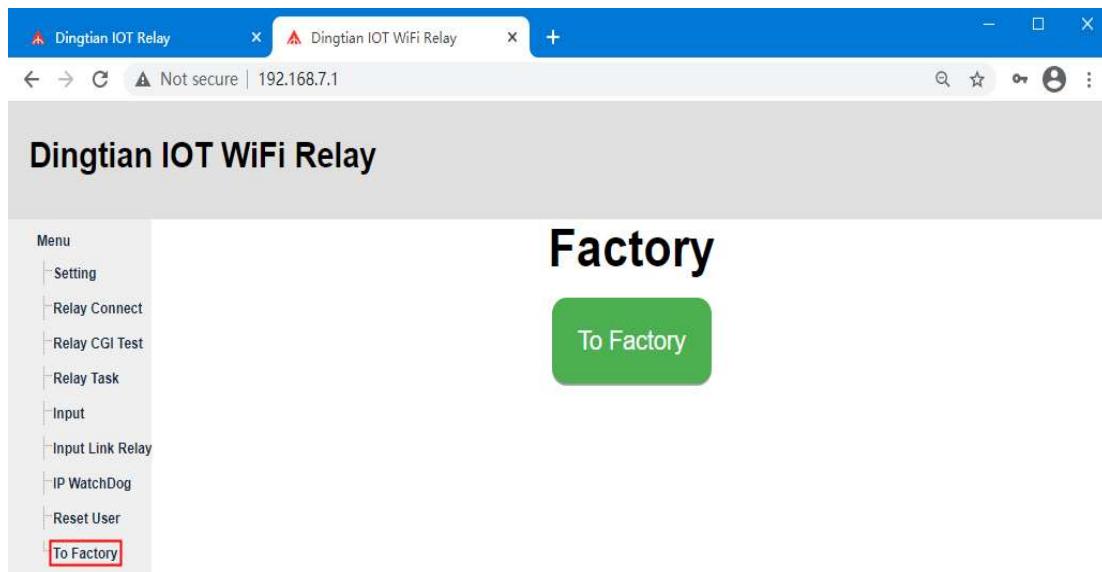

When Enable IP WatchDog function, all relay ON, when the "Watch IP" offline, relay OFF, after seconds, the relay ON automatically, **"Ping Interval"** must be bigger than **"Ping Timeout"**

The screenshot shows the 'IP WatchDog' configuration page. The sidebar menu is identical to the previous page, with 'IP WatchDog' highlighted by a red box. The main area is titled 'IP WatchDog' and contains a table with 9 rows (1 offline to 9 offline) and 12 columns (WatchDog, Enable, Off Relay, Watch IP, Relay, Off, Ping Interval, Ping Timeout, Ping Retry Times, Offline Action Time). A checkbox labeled 'Enable IP WatchDog' is located above the table. Below the table is a note: 'Off Relay: Select Add/Click Delete' and 'Ping Interval Must Greater than Ping Timeout'. A large green 'Save' button is centered at the bottom, and a message 'load success!' is displayed below it.

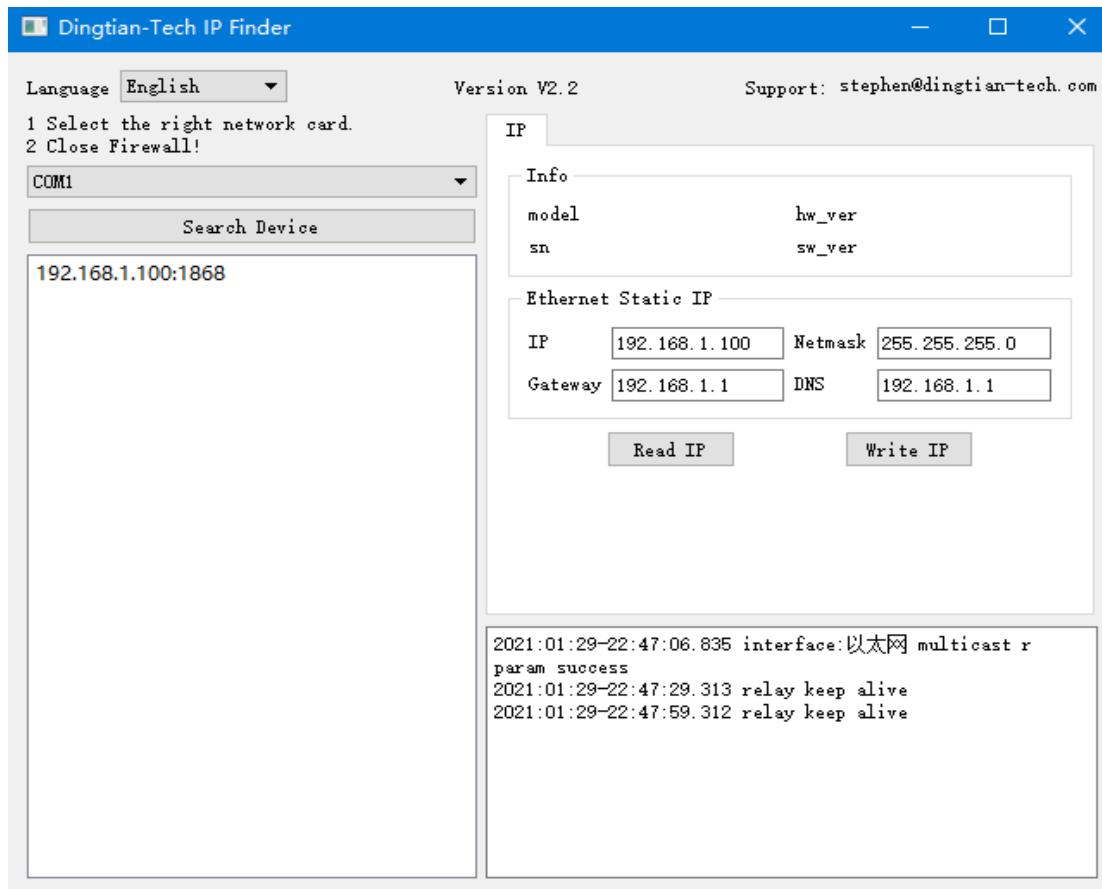

5.9 Reset User

5.10 To Factory

6 IP Finder

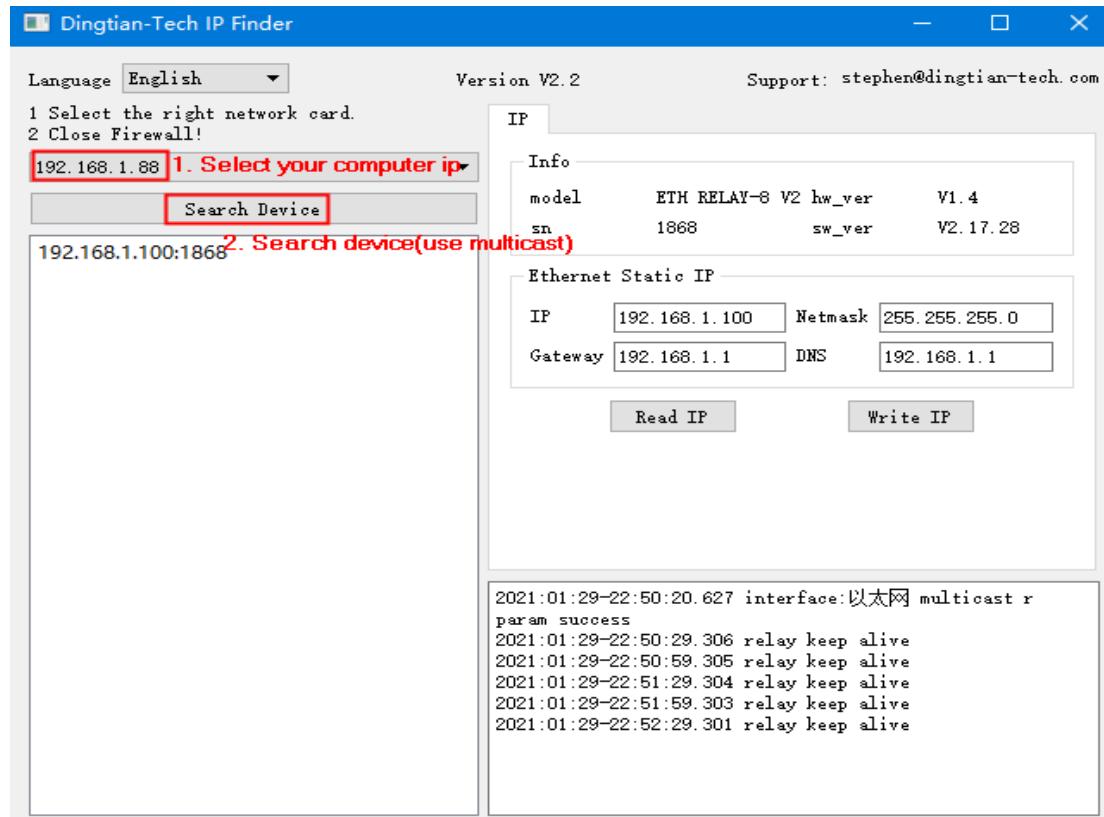

Notice:

please close all firewall,security software(windows defender/firewall also must close)
otherwise nothing will be find

6.1 Search Device

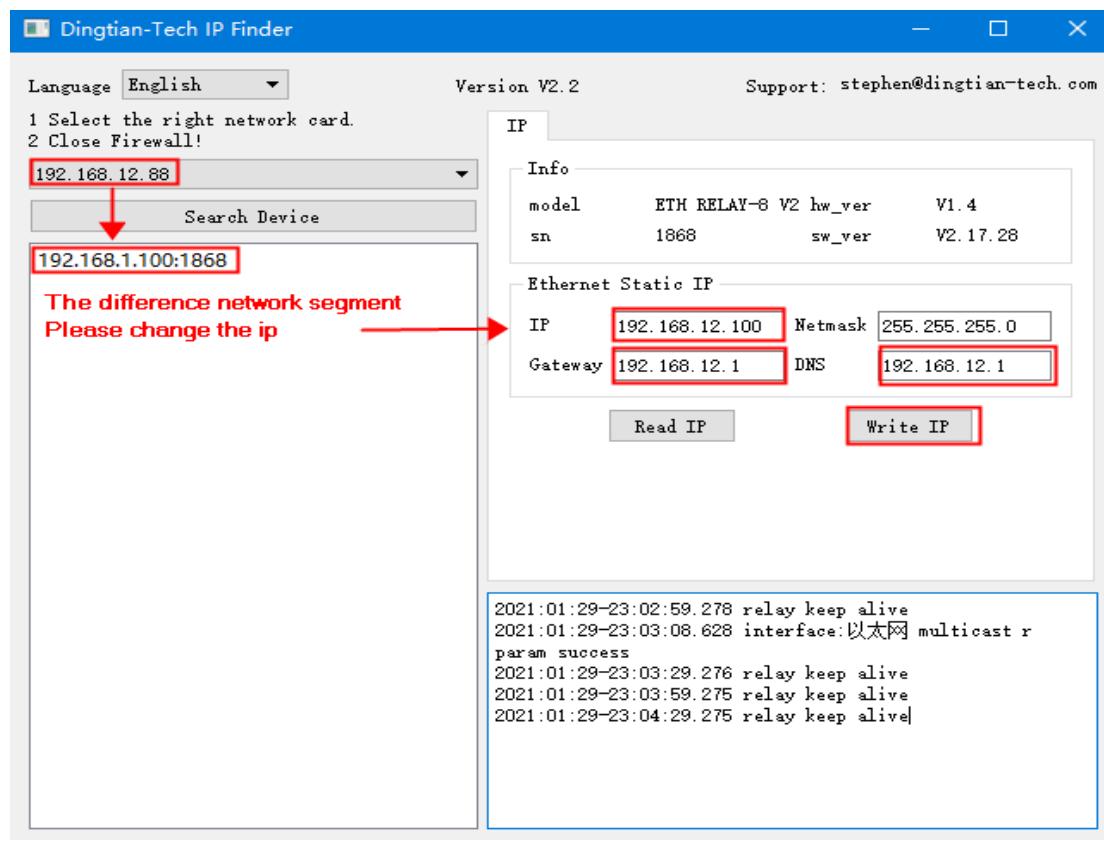

Note: When you use IP Finder to check your relay board ip, please keep your computer just connect with one relay board and the communication of relay board just has one(only Ethernet or WIFI)

Then we can find computer ip is 192.168.1.88, relay board ip is 192.168.1.100

If your computer ip is not the same network segment as relay board, you can change the IP in Ethernet Static IP

6.2 Change Static IP

Change Static IP and Click "Write IP", then your relay board ip is 192.168.12.100

Appendix I How to Test Command

step 1: download SDK

we can find network tool in SDK

http://www.dingtian-tech.com/sdk/relay_sdk.zip

unzip relay_sdk.zip

network tool name is net_test

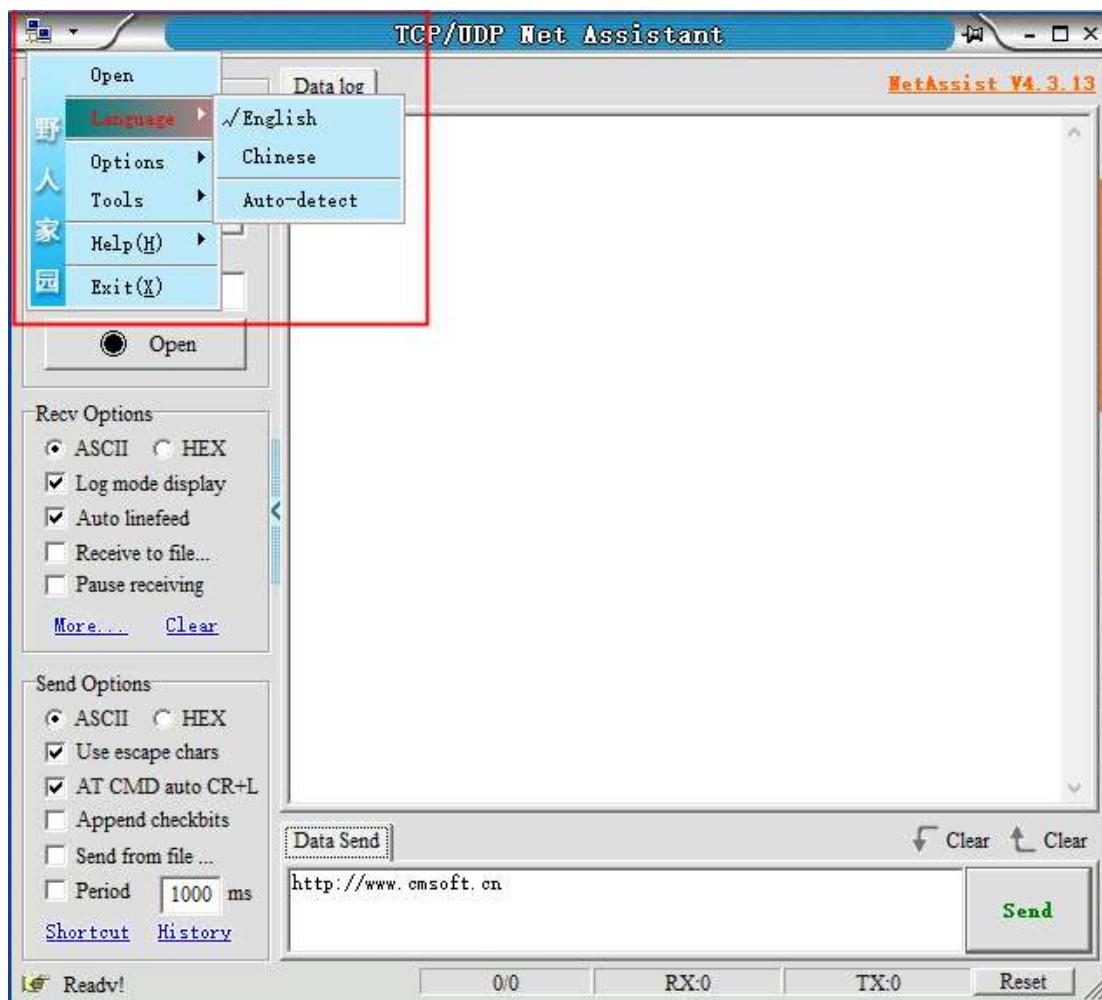

rs485 tool name is rs485_test

名称	修改日期	类型
net_test	2020/2/10 10:17	文件
rs485_test	2020/2/10 10:17	文件
cgitest_v1_1.exe	2020/2/10 10:12	应用
programing manual_en.pdf	2020/2/8 21:13	PDF
readme.txt	2020/2/10 10:18	文本
relay.sh	2019/9/25 23:48	Shell
relay.sh_how_to.txt	2019/9/25 23:59	文本
relaytool_v2_0.exe	2020/2/8 23:32	应用
user_manual_en.pdf	2020/2/8 21:41	PDF

Access directory "net_test"

名称
NetAssist.cfg
NetAssist.exe

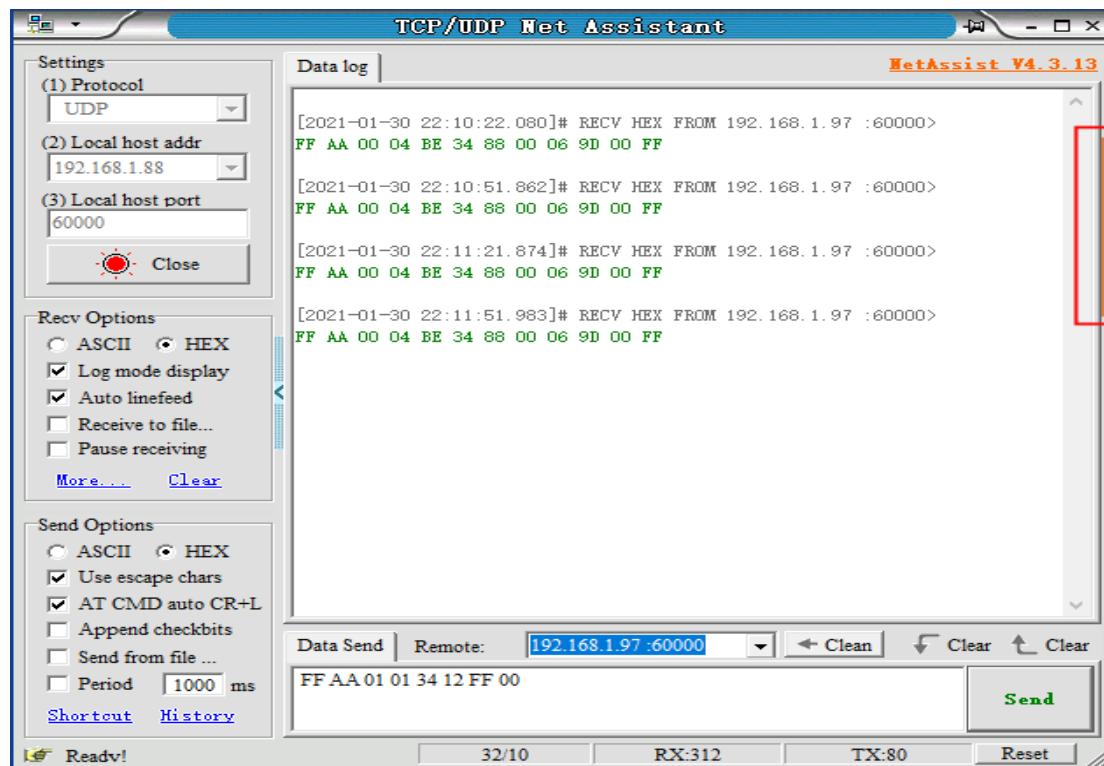

step 2: Change NetAssist language

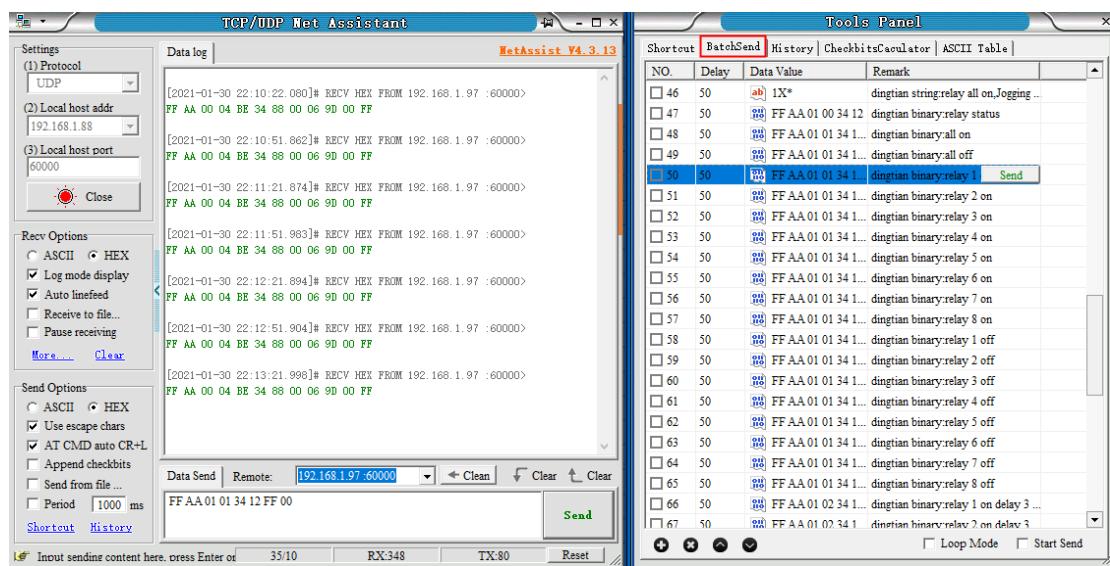

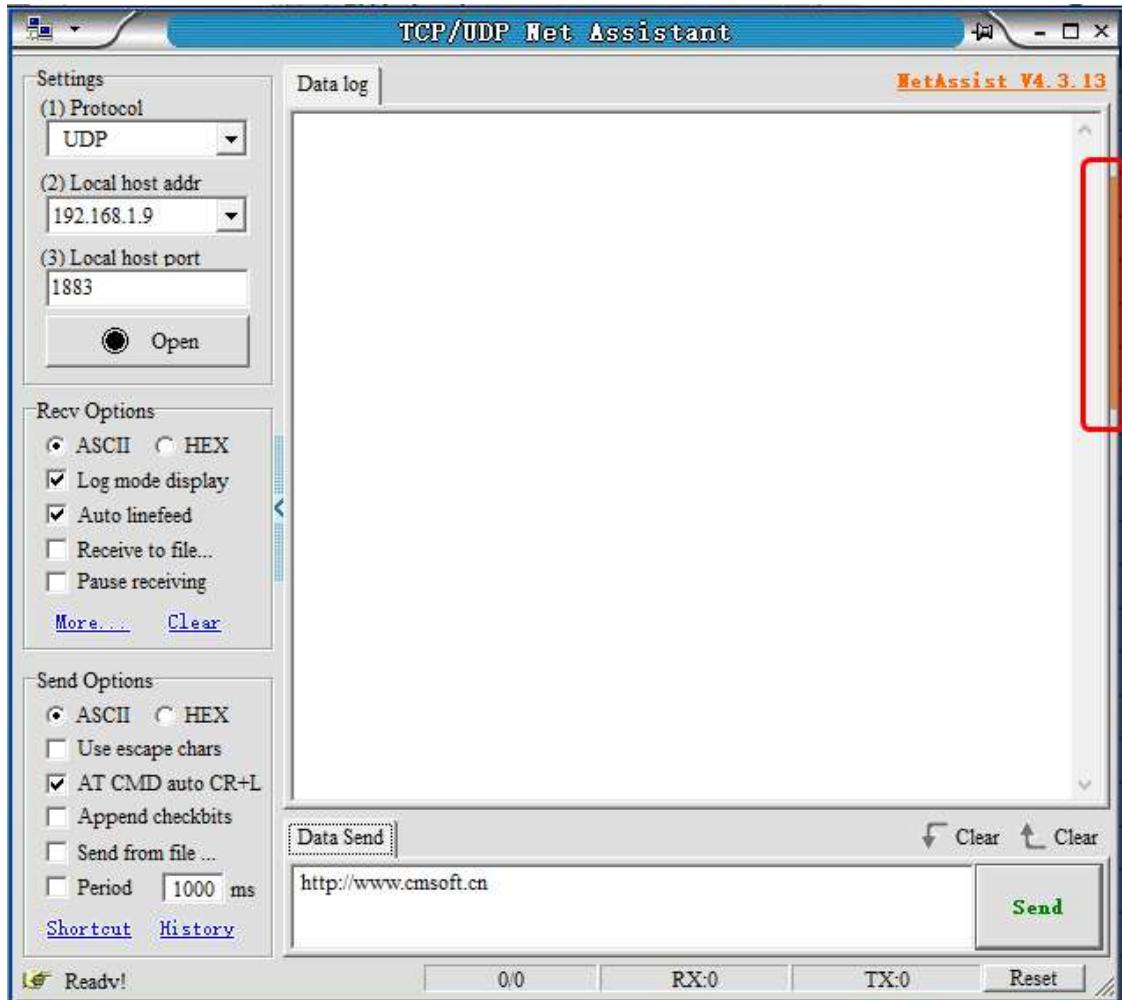

step 3: Control relay via NetAssist network tool by wifi module

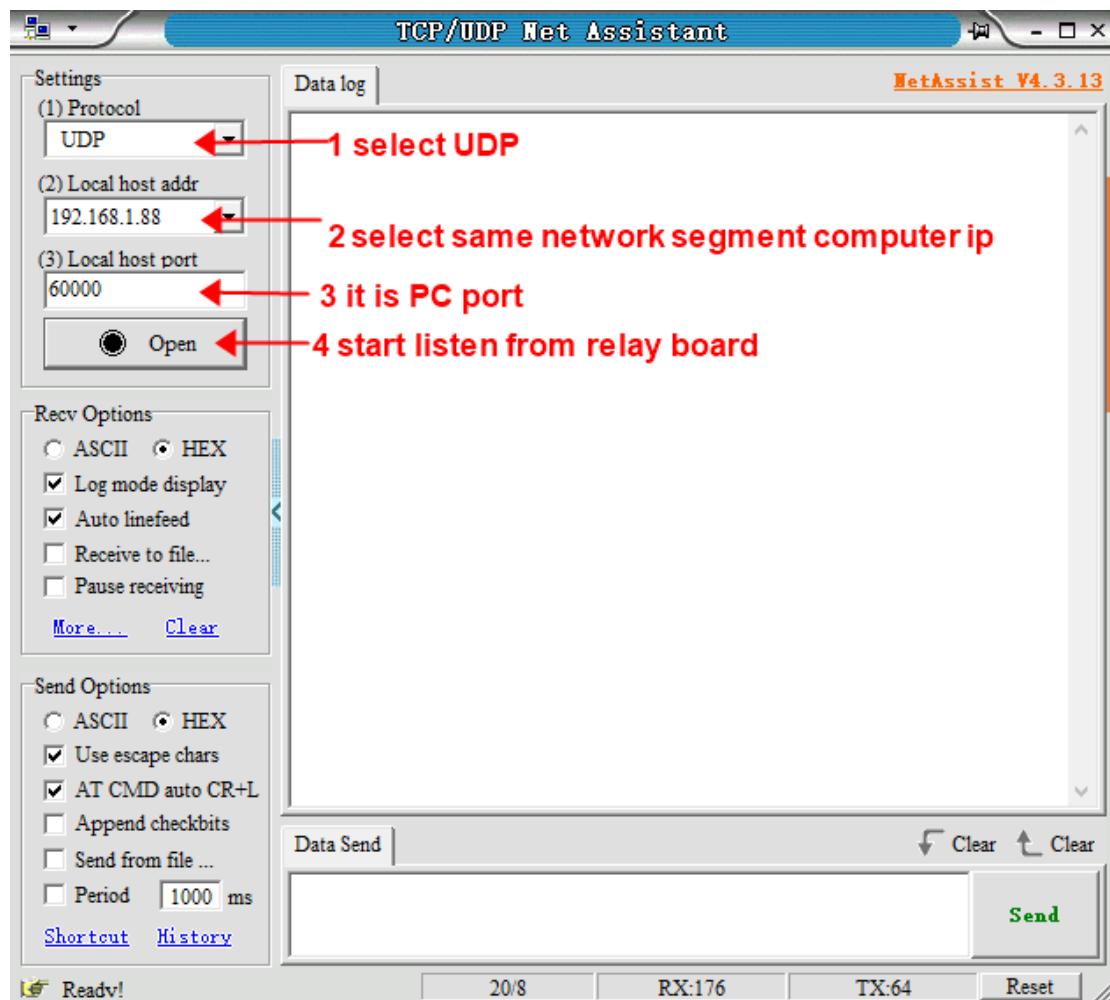

open NetAssist.exe

Shown in red box, open expansion panel

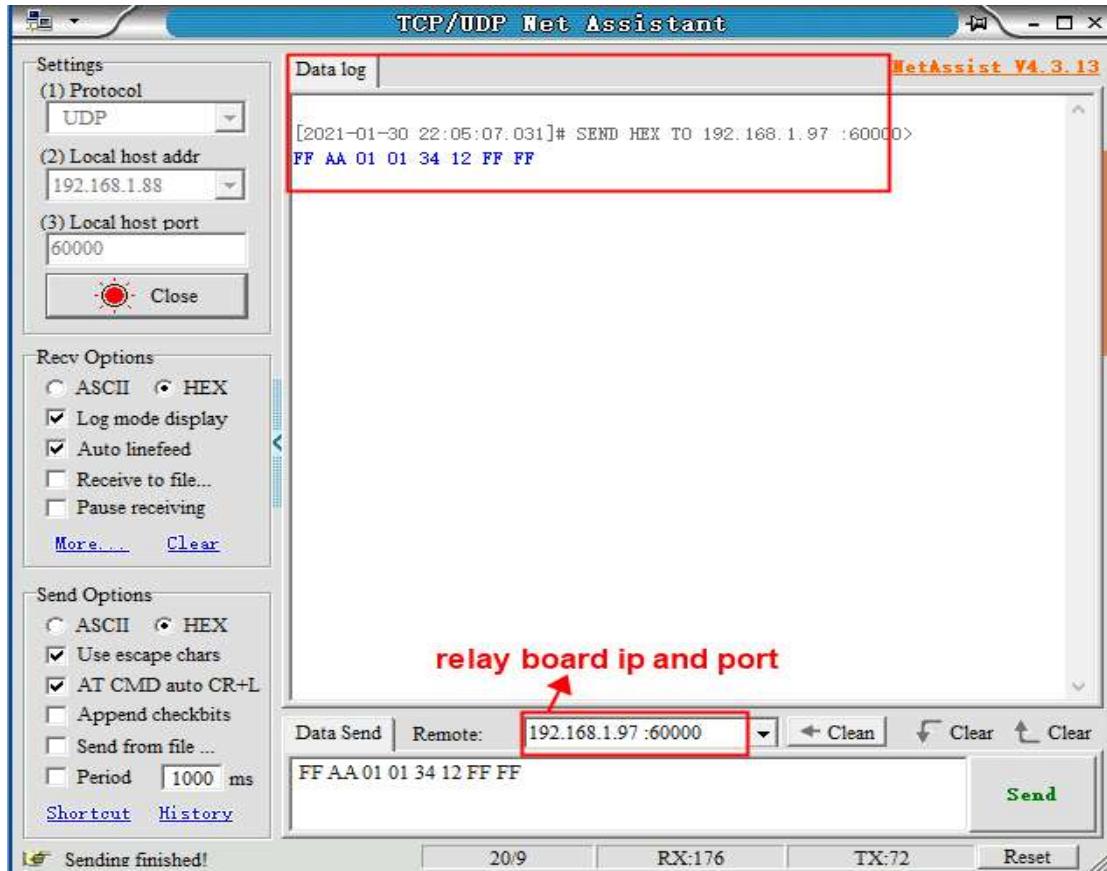

step 4: open UDP listen.

now relay board send relay status to pc via wifi module

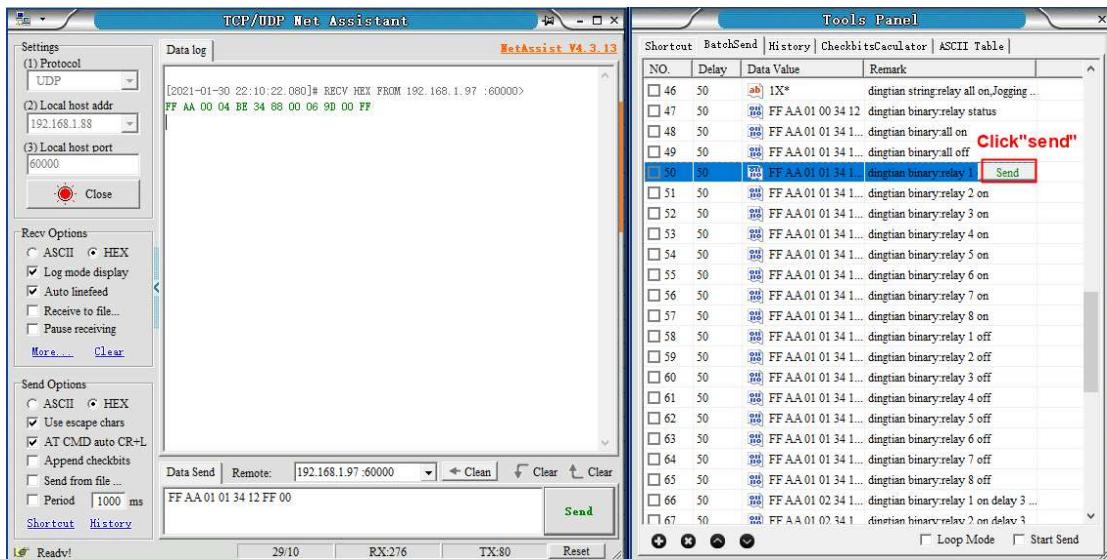

step 5: control relay via wifi module

NetAssist tool saved preset command

we only need send to relay board via netAssist

like below set relay 1 on

Appendix II How to use Domoticz

Notice:

- 1 Close your firewall
- 2 All command and script run as root/administrator
- 3 please step by step

Please install domotiz first

https://releases.domoticz.com/releases/release/domoticz_windows_x86.zip

step 1: install Dingtian plugin to Domoticz

Dingtian plugin find in SDK or github

http://www.dingtian-tech.com/sdk/relay_sdk.zip

<https://github.com/dtlzp/Domoticz-Dingtian-Relay-Plugin>

1 Stop Domoticz

2 Copy Domoticz_plugins\dingtian to Domoticz plugin dir

to Domoticz install dir

now Dingtian Relay plugin install to Domoticz successfully.

step 2: config Dingtian Relay board

1 config relay board UDP Server,Remote Port,Local Port,Keep Alive Second and Relay Password (firmware version <= 2.16.xx)

2 config relay board UDP Server, Remote Port,Local Port and Relay Password (firmware version is 2.17.xx)

Domoticz Ethernet

The screenshot shows the 'Dingtian IOT Relay' configuration interface. On the left, a sidebar lists menu items: Setting, Relay Connect (highlighted with a red box), Relay CGI Test, Relay Task, Input, Input Link Relay, IP WatchDog, Reset User, To Factory, and Reboot.

The main area is titled 'Relay'. It contains a table for configuring various communication channels:

Channel	Protocol	Addr	Baud	Databits	Stopbits	Parity
RS485	Modbus-RTU	1	115200bps	8bit	1bit	None
CAN	Dingtian String	1	125Kbps			

Below the table, there are several configuration sections:

- ETH-UDP1**: Remote Address: 192.168.1.9, Remote Port: 60000, Local Port: 60000 (highlighted with a red box, step 2).
- ETH-UDP2**: Remote Address: 192.168.1.9, Remote Port: 60001, Local Port: 60001.
- ETH-TCP Server**: Modbus-TCP, Domoticz server address: 192.168.1.9, Remote Port: 502.
- ETH-TCP Client**: Modbus-RTU Over TCP, Remote Address: 192.168.1.9, Broker Address: 192.168.1.9, Broker Port: 1883, Broker Username: mqtt, Broker Password: 123.
- ETH-MQTT**: MQTT.

Other settings include:

Relay Password	0	0~9999(0 no password)
Keep Alive Second	30	1~120 second(0 close)
Jogging Time	5	1~255 (1=100ms)
Power Failure Recovery Relay	No	
Input Control Relay	Yes	

Button Type (checkboxes): Momentary, Momentary, Momentary, Momentary, Momentary, Momentary, Momentary, Momentary.

A large green button labeled **Save** is highlighted with a red box (step 4).

Relay Test section:

- Relay1:Off
- Relay2:Off
- Relay3:Off
- Relay4:Off
- Relay5:Off
- Relay6:Off
- Relay7:Off
- Relay8:Off

Domoticz WIFI

The screenshot shows the 'Dingtian IOT WiFi Relay' configuration interface. On the left sidebar, under the 'Setting' menu, the 'Relay Connect' option is highlighted with a red box and labeled '1'. The main content area is titled 'Relay' and contains several configuration sections:

- Relay Connect:** A table with columns 'Channel', 'Protocol', 'Remote Address', 'Remote Port', and 'Local Port'. It lists five entries:
 - WIFI-UDP1: Protocol Dingtian Binary, Remote Address 192.168.1.9, Remote Port 60000, Local Port 60000.
 - WIFI-UDP2: Protocol Dingtian String, Remote Address 192.168.1.9, Remote Port 60001, Local Port 60001.
 - WIFI-TCP Server: Protocol Modbus-TCP, Remote Address Domoticz server address, Remote Port 502, Local Port 502.
 - WIFI-TCP Client: Protocol Modbus-RTU Over TCP, Remote Address 502.
 - WIFI-MQTT: Protocol MQTT, Broker Address, Broker Port 1883, Broker Username mqtt, Broker Password 123.
- Other:** A group of settings:
 - Relay Password: 0 (0~9999(no password))
 - Keep Alive Second: 30 (1~120 second(0 close))
 - Jogging Time: 5 (1~255 (1=100ms))
- Save:** A green button labeled 'Save' with a red box and label '4'.
- Relay Test:** A section with eight green buttons labeled 'Relay1:Off', 'Relay2:Off', 'Relay3:Off', 'Relay4:Off', 'Relay5:Off', 'Relay6:Off', 'Relay7:Off', and 'Relay8:Off'.

Dingtian Relay board web page **Relay Connect**

set **UDP Server, Remote Port, Local Port, Relay Password and Keep Alive Second**(donot need to set for firmware 2.17.xx)

Notice: **UDP Server set to Domoticz Server IP Save config**

step 3: Add Dingtian Relay to Domoticz

1 Install Python 3.8.2

download link:

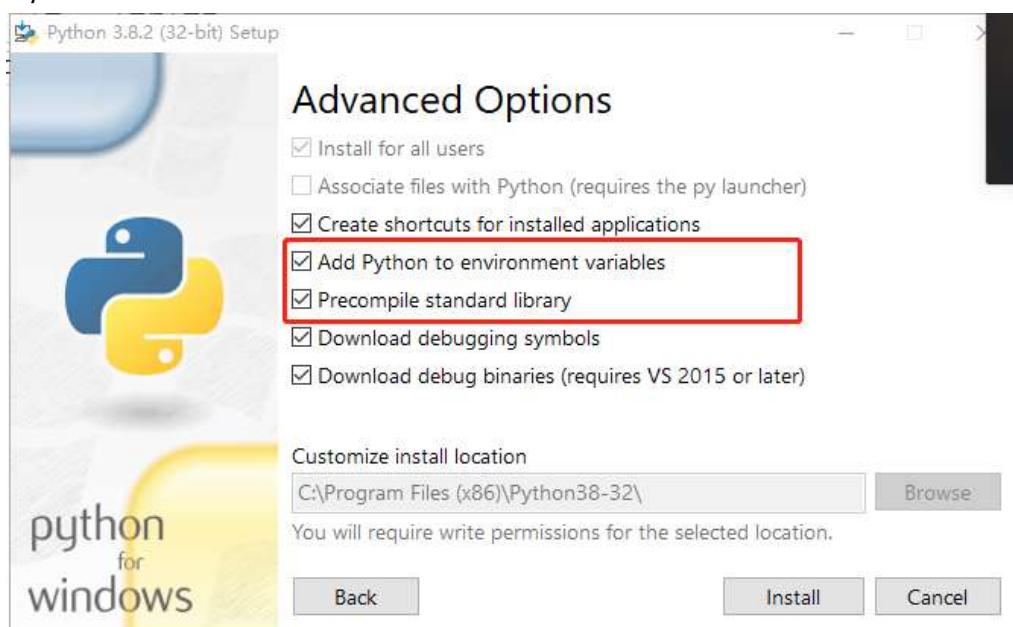

<https://www.python.org/ftp/python/3.8.2/python-3.8.2.exe>

Notice: Domoticz only support 32bit Python

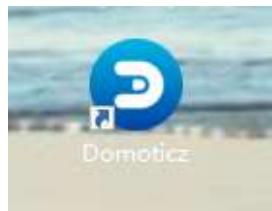

after download, install it

Add Python to environment

2 Run to Domoticz

3 Add Dingtian Relay to Domoticz

1 Find Hardware Menu

The screenshot shows the Domoticz web interface at the URL <http://127.0.0.1:8080/#/LightSwitches>. The top navigation bar includes links for Dashboard, Switches, Scenes, Temperature, Weather, Utility, and Setup. The Setup link is highlighted with a red box. A sidebar on the right contains links for Hardware, Devices, Settings, Check for Update, More Options, Log, and About. The main content area displays the message "No Lights/Switches found or added in the system...".

2 Input Dingtian Relay config(Ethernet)

The screenshot shows the Domoticz web interface at the URL <http://127.0.0.1:8080/#/Hardware>. The page displays a table with columns for Idx, Name, Enabled, Type, Address, Port, and Data Timeout. A message indicates "No data available in table". Below the table are buttons for Update and Delete. A detailed configuration form is shown for a device named "dingtian-relay":

- Enabled:
- Name: dingtian-relay 1
- Type: Dingtian Relay 2
- Data Timeout: Disabled Specifying a Data Timeout will restart the hardware device if no data is received for the specified time.
Do not enable this option for devices that do not receive data!
- Wiki URL: <https://github.com/dtzp/Domoticz-Dingtian-Relay-Plugin>
- Product URL: https://www.dingtian-tech/en_us/product.html?tab=relay
- IP Address: 192.168.1.100 3
- Port: 60001 4
- Channel Count: 8 5
- Password: 0 6
- Debug: False 7

At the bottom of the configuration form is a blue "Add" button with the number "8" next to it.

3. Input Dingtian Relay config(WIFI)

The screenshot shows the Domoticz web interface at <http://127.0.0.1:8080/#/Hardware>. The top navigation bar includes links for Dashboard, Switches, Scenes, Temperature, Weather, Utility, and Setup. The main content area displays a table for hardware devices. A message at the top states "No data available in table". Below the table, there are buttons for "Update" and "Delete". The configuration form for a new device is filled out as follows:

- Enabled:
- Name: dingtian-relay 1
- Type: Dingtian Relay 2
- Data Timeout: Disabled 3
Specifying a Data Timeout will restart the hardware device if no data is received for the specified time.
Do not enable this option for devices that do not receive data!
- Wiki URL: <https://github.com/dtlzp/Domoticz-Dingtian-Relay-Plugin>
- Product URL: https://www.dingtian-tech/en_us/product.html?tab=relay
Dingtian-tech Relay Domoticz Plugin.
- IP Address: 192.168.1.97 4
- Port: 60001 5
- Channel Count: 8 6
- Password: 0 7
- Debug: False 8

At the bottom right of the configuration form is a blue "Add" button.

Type, IP Address, Port, Channel Count, Password must correct,

Password is 1 config relay board UDP Server, Remote Port, Local Port, Keep Alive Second and Relay Password

now check parameters is ok,

click "**Add**" to save

Now you can find Hardware and Relay

The screenshot shows the Domoticz web interface at <http://127.0.0.1:8080/#/Hardware>. The top navigation bar includes links for Dashboard, Switches, Scenes, Temperature, Weather, Utility, and Setup. The main content area displays a table for hardware devices. The table shows two entries:

Idx	Name	Enabled	Type	Address	Port	Data Timeout
3	dingtian-relay	Yes	Dingtian Relay	192.168.1.100	Ethernet	Disabled
2	dingtian-relay	Yes	Dingtian Relay	192.168.1.97	WIFI	Disabled

Below the table, there are buttons for "Update" and "Delete". The configuration form for the second device (Idx 2) is identical to the one in the previous screenshot, with the IP address changed to 192.168.1.97 and the port to 60001. The "Add" button is located at the bottom right of the configuration form.

4 Multiple Relay board Add to Domoticz

Domoticz Need 2 UDP port for each Relay board

default is: 60000 and 60001

you can add multiple with difference UDP port like:

60002 and 60003

60004 and 60005

60006 and 60007

below is example 60002 and 60003

The screenshot shows the 'Add Device' configuration page for a 'Dingtian Relay'. The 'Port' field is highlighted with a red box, containing the value '60003'. Other fields include 'Name: eth2-r8', 'Type: Dingtian Relay', 'IP Address: 192.168.1.100', 'Channel Count: 8', and 'Password: 0'. A note at the bottom states: 'Specifying a Data Timeout will restart the hardware device if no data is received for the specified time. Do not enable this option for devices that do not receive data!'. A blue 'Add' button is at the bottom.

Relay

Channel	Protocol	Addr	Baud	Databits	Stopbits	Parity
RS485	Modbus-RTU	1	115200bps	8bit	1bit	None
CAN	Dingtian String	1	125Kbps			
ETH-UDP1	Dingtian Binary	192.168.1.88		Remote Port	Local Port	
ETH-UDP2	Dingtian String	192.168.1.88		Remote Port	Local Port	
ETH-TCP Server	Modbus-TCP				Local Port	
ETH-TCP Client	Modbus-RTU Over TCP	192.168.1.9		Remote Port		
ETH-MQTT	MQTT	192.168.1.88		Broker Port	Broker Username	Broker Password

5 Add Relay to Switches Page

step 4: Domoticz mobile application

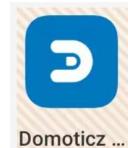

Please follow up step 1/2/3 firstly to confirm PC Domoticz connect

1 Set the Location, User name and password on PC Domoticz

2 Install Domoticz

Android google play “Domoticz Home Automation Lite”, which is free of charge and cannot refresh automatically. So please refresh by manual after do it

3 Set Domoticz Server parameter

Server Name
domoticz server

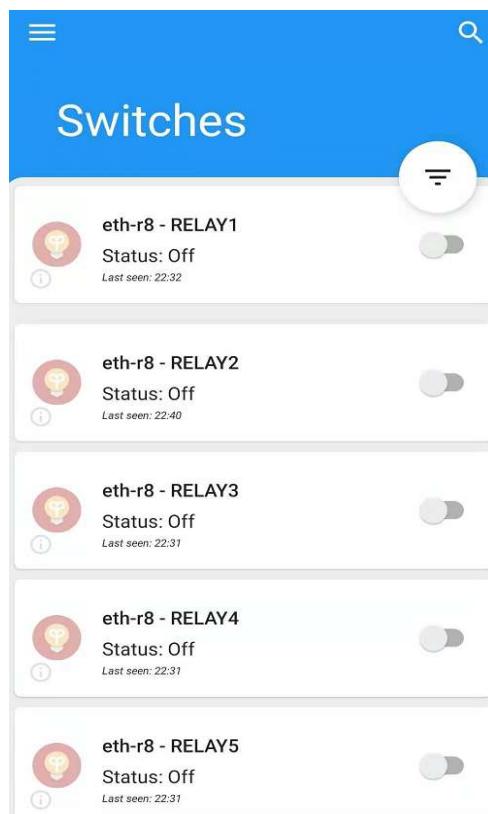

Server address
192.168.1.88

HTTP Port 8080

Username admin Password Show password

Directory

Different server address
Use different address for local connection

Domoticz mobile connect successfully, then you can control the switch by mobile phone

Appendix III How to MQTT

MQTT Ethernet

The screenshot shows a web browser window with two tabs: "Dingtian IOT Relay" and "Dingtian IOT WiFi Relay". The active tab is "Dingtian IOT WiFi Relay" at the URL 192.168.1.100/menu_page.html. The page title is "Dingtian IOT Relay". On the left, a sidebar menu includes "Setting", "Relay Connect", "Relay CGI Test", "Relay Task", "Input", "Input Link Relay", "IP WatchDog", "Reset User", "To Factory", and "Reboot". The main content area is titled "Setting" and contains a table of device configuration parameters:

Hardware Version	V1.4
Software Version	V2.17.28
Build Date	2021-01-21 21:23:13
Model	Dingtian IOT RELAY-8
Serial Number	1868
Date Time	1/30/2021, 22:47:00
NTP Server	pool.ntp.org
Hostname	Dingtian-Relay1868
Hostname+Suffix	Dingtian-Relay
HTTP Server Port	80
DHCP	No
IP	192.168.1.100
Netmask	255.255.255.0
Gateway	192.168.1.1
DNS	192.168.1.1
MAC	bc:34:88:00:06:9d
WiFi AP IP	192.168.7.1
WIFI STA IP	192.168.1.97

A green "Save" button is located at the bottom right of the form.

MQTT WIFI

The screenshot shows a web browser window titled "Dingtian IOT WiFi Relay". The URL is "Not secure | 192.168.1.100/menu_page.html". The main content is a "Setting" page for a Dingtian IOT Relay. On the left is a sidebar with a "Menu" section containing links like "Setting", "Relay Connect", "Relay CGI Test", etc. The main area has a large "Setting" title and a table of configuration parameters. A red box highlights the "Serial Number" field, which contains "1868". The table rows include:

Hardware Version	V1.4
Software Version	V2.17.28
Build Date	2021-01-21 21:23:13
Model	Dingtian IOT RELAY-8
Serial Number	1868
Date Time	1/30/2021, 22:47:00
NTP Server	pool.ntp.org
Hostname	Dingtian-Relay1868
Hostname+Suffix	Dingtian-Relay + SN
HTTP Server Port	80
DHCP	No
IP	192.168.1.100
Netmask	255.255.255.0
Gateway	192.168.1.1
DNS	192.168.1.1
MAC	bc:34:88:00:06:9d
WiFi AP IP	192.168.7.1
WIFI STA IP	192.168.1.97

A green "Save" button is located at the bottom right of the form.

Appendix IV How to CoAP

you need linux system

step 1: compile libcoap

```
git clone --recurse-submodules https://github.com/obgm/libcoap  
./autogen.sh  
./configure --disable-manpages --enable-examples --enable-tests  
make
```

step 2: CoAP Get relay status

Relay Status(1:ON, 0:OFF)

```
./coap-client -m get coap://192.168.1.100/dingtian/r1  
./coap-client -m get coap://192.168.1.100/dingtian/r2  
./coap-client -m get coap://192.168.1.100/dingtian/r3  
./coap-client -m get coap://192.168.1.100/dingtian/r4  
./coap-client -m get coap://192.168.1.100/dingtian/r5  
./coap-client -m get coap://192.168.1.100/dingtian/r6  
./coap-client -m get coap://192.168.1.100/dingtian/r7  
./coap-client -m get coap://192.168.1.100/dingtian/r8
```

Input Status(1:High, 0:Low)

```
./coap-client -m get coap://192.168.1.100/dingtian/i1  
./coap-client -m get coap://192.168.1.100/dingtian/i2  
./coap-client -m get coap://192.168.1.100/dingtian/i3  
./coap-client -m get coap://192.168.1.100/dingtian/i4  
./coap-client -m get coap://192.168.1.100/dingtian/i5  
./coap-client -m get coap://192.168.1.100/dingtian/i6  
./coap-client -m get coap://192.168.1.100/dingtian/i7  
./coap-client -m get coap://192.168.1.100/dingtian/i8
```

step 3: CoAP Control relay(simple)

```
./coap-client -e "1" -m put coap://192.168.1.100/dingtian/r1      # relay1 ON  
./coap-client -e "0" -m put coap://192.168.1.100/dingtian/r1      # relay1 OFF  
./coap-client -e "1" -m put coap://192.168.1.100/dingtian/r2      # relay2 ON  
./coap-client -e "0" -m put coap://192.168.1.100/dingtian/r2      # relay2 OFF  
./coap-client -e "1" -m put coap://192.168.1.100/dingtian/r3      # relay3 ON  
./coap-client -e "0" -m put coap://192.168.1.100/dingtian/r3      # relay3 OFF  
./coap-client -e "1" -m put coap://192.168.1.100/dingtian/r4      # relay4 ON  
./coap-client -e "0" -m put coap://192.168.1.100/dingtian/r4      # relay4 OFF  
./coap-client -e "1" -m put coap://192.168.1.100/dingtian/r5      # relay5 ON  
./coap-client -e "0" -m put coap://192.168.1.100/dingtian/r5      # relay5 OFF  
./coap-client -e "1" -m put coap://192.168.1.100/dingtian/r6      # relay6 ON  
./coap-client -e "0" -m put coap://192.168.1.100/dingtian/r6      # relay6 OFF
```

```
./coap-client -e "1" -m put coap://192.168.1.100/dingtian/r7      # relay7 ON  
./coap-client -e "0" -m put coap://192.168.1.100/dingtian/r7      # relay7 OFF  
./coap-client -e "1" -m put coap://192.168.1.100/dingtian/r8      # relay8 ON  
./coap-client -e "0" -m put coap://192.168.1.100/dingtian/r8      # relay8 OFF
```

step 4: CoAP Control relay

format:

```
status:type:time:password  
status:0,1  
type:ON/OFF,DELAY,JOGGING  
time:(ON/OFF)0,(DELAY)1~65535second,(JOGGING)1~255*100ms  
password:0~9999
```

example:

```
1:ON/OFF:0:4660  
status:1  
type:ON/OFF  
time:0  
password:4660
```

ON/OFF example:

```
./coap-client -e "1:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r1  
./coap-client -e "1:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r2  
./coap-client -e "1:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r3  
./coap-client -e "1:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r4  
./coap-client -e "1:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r5  
./coap-client -e "1:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r6  
./coap-client -e "1:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r7  
./coap-client -e "1:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r8  
.coap-client -e "0:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r1  
.coap-client -e "0:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r2  
.coap-client -e "0:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r3  
.coap-client -e "0:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r4  
.coap-client -e "0:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r5  
.coap-client -e "0:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r6  
.coap-client -e "0:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r7  
.coap-client -e "0:ON/OFF:0:4660" -m put coap://192.168.1.100/dingtian/r8
```

DELAY example:

```
./coap-client -e "1:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r1  
./coap-client -e "1:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r2  
./coap-client -e "1:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r3  
./coap-client -e "1:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r4  
./coap-client -e "1:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r5
```

```
./coap-client -e "1:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r6
./coap-client -e "1:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r7
./coap-client -e "1:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r8
./coap-client -e "0:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r1
./coap-client -e "0:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r2
./coap-client -e "0:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r3
./coap-client -e "0:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r4
./coap-client -e "0:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r5
./coap-client -e "0:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r6
./coap-client -e "0:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r7
./coap-client -e "0:DELAY:5:4660" -m put coap://192.168.1.100/dingtian/r8
```

JOGGING example:

```
./coap-client -e "1:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r1
./coap-client -e "1:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r2
./coap-client -e "1:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r3
./coap-client -e "1:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r4
./coap-client -e "1:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r5
./coap-client -e "1:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r6
./coap-client -e "1:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r7
./coap-client -e "1:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r8
./coap-client -e "0:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r1
./coap-client -e "0:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r2
./coap-client -e "0:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r3
./coap-client -e "0:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r4
./coap-client -e "0:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r5
./coap-client -e "0:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r6
./coap-client -e "0:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r7
./coap-client -e "0:JOGGING:5:4660" -m put coap://192.168.1.100/dingtian/r8
```

Appendix V How to “input mutual control”

Example param:

DevA IP: 192.168.1.100

DevB IP: 192.168.1.101

web config “Input Control Relay”

“No”:input only control remote output

“Yes”:input control local output and remote output

DevA web config:

Menu

Appendix VI How to Home Assistant

Notice:

- 1 Close your firewall
- 2 All command and script run as root/administrator
- 3 please step by step

Step 1 config Relay board

Dingtian IOT Relay

Relay

Menu

Setting

Relay Connect

Relay CGI Test

Relay Task

Input

Input Link Relay

IP WatchDog

Reset User

To Factory

Upgrade

Reboot

Channel	Protocol	Addr	Baud	Databits	Stopbits	Parity
RS485	Modbus-RTU	1	115200bps	8bit	1bit	None
CAN	Dingtian String	ID	Speed	Frame Type		
UDP1	Dingtian Binary	192.168.1.9		Remote Address	Remote Port	Local Port
UDP2	Dingtian String	192.168.1.9		Remote Address	Remote Port	Local Port
TCP Server	Modbus-TCP			Remote Address	Remote Port	Local Port
TCP Client	Modbus-RTU Over TCP	192.168.1.9	502			
MQTT	MQTT	Broker Address	Broker Port	Broker Username	Broker Password	

Other

Relay Password: 0 (0~9999(0 no password))

Keep Alive Second: 30 (1~120 second(0 close))

Power Failure Recovery Relay: No

Save

Relay Test

Relay1:Off Relay2:Off

The “**192.168.1.9**” is MQTT broker IP

Step 2 Install MQTT Broker

Link step 1: Install and config Broker for details how to install MQTT Broker

Step 3 Install Home Assistant

1 install python

Python download link:

<https://www.python.org/ftp/python/3.10.0/python-3.10.0.exe>

2 install Home Assistant

Windows install command:

python -m pip install --upgrade homeassistant tzdata met

3 Add relay board Switch and input to Home Assistant

Home assistant default config yaml path:

<C:\Users\Administrator\AppData\Roaming\.homeassistant\configuration.yaml>

example is 2 channel relay board, SN is 100

when you use it please replace with you relay board SN

SDK path:

MQTT\home_assistant_example.yaml

add below lines to [configuration.yaml](#)

```
#####
# start #####
switch:
  - platform: mqtt
    unique_id: dingtian100-r1
    name: "Dingtian Ethernet Switch1"
    state_topic: "/dingtian/relay100/out/r1"
    command_topic: "/dingtian/relay100/in/r1"
    availability:
      - topic: "/dingtian/relay100/out/lwt_availability"
        payload_available: "online"
        payload_not_available: "offline"
      payload_on: "ON"

4 Home Assistant config MQTT Broker

Windows open Home Assistant command:

`hass -open-ui`

Home Assistant web link:

<http://127.0.0.1:8123/>

config MQTT Broker

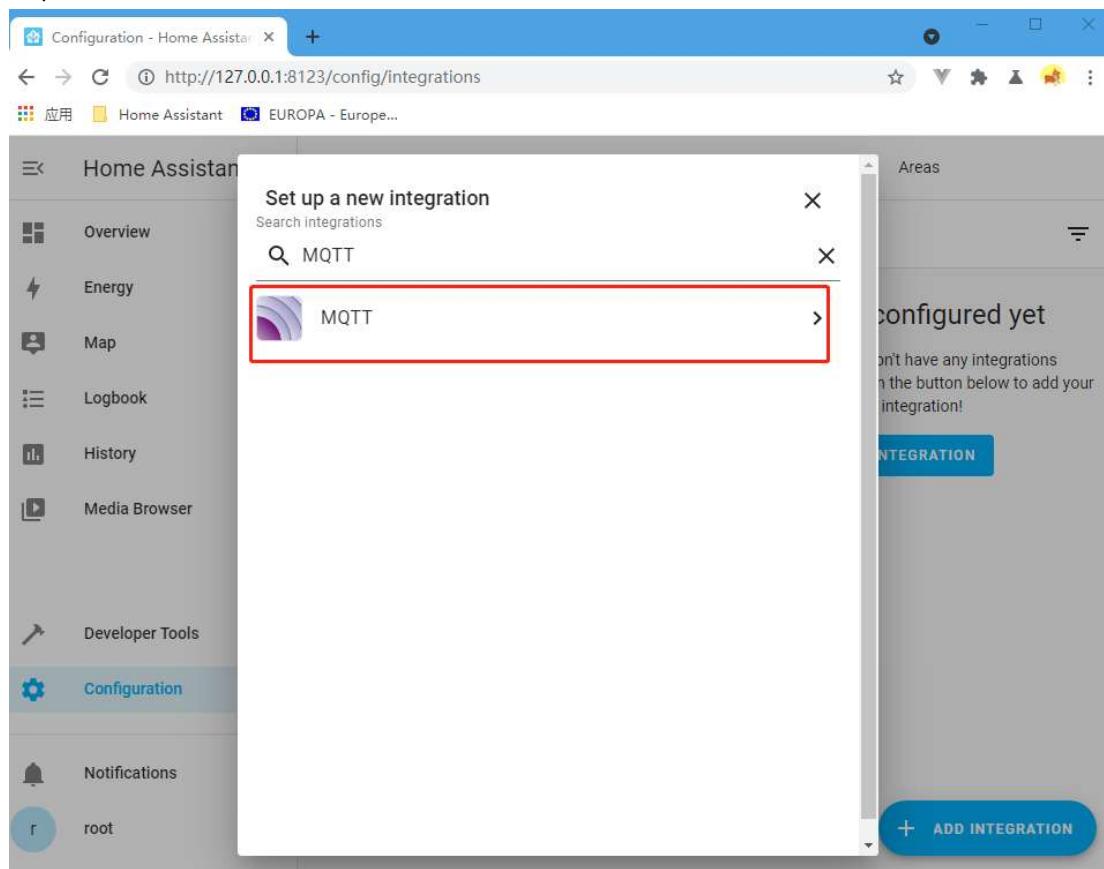

step 1

The screenshot shows the Home Assistant Configuration dashboard at <http://127.0.0.1:8123/config/dashboard>. The left sidebar has a red box around the 'Configuration' item (1). The main content area is titled 'Configure Home Assistant' with the sub-section 'Integrations' highlighted by a red box (2). A red box also surrounds the 'ADD INTEGRATION' button at the bottom right of the integrations list.

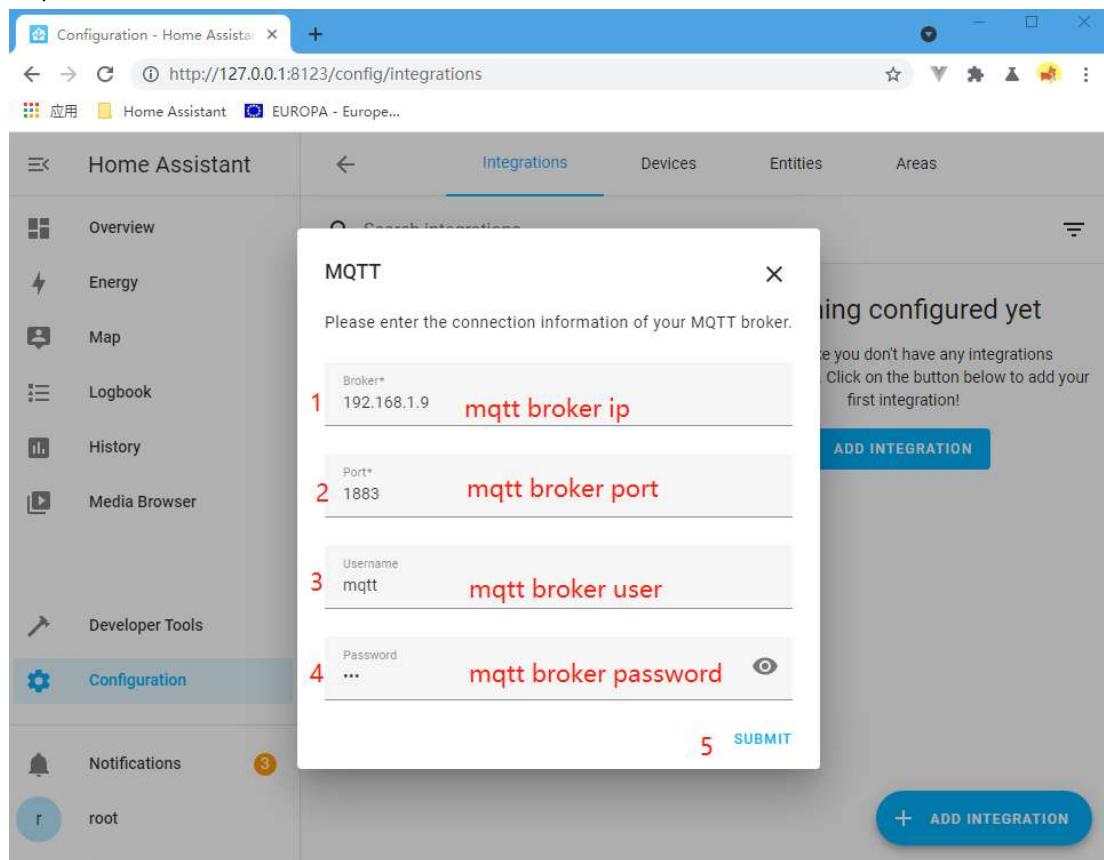

step 2

The screenshot shows the 'Integrations' page at <http://127.0.0.1:8123/config/integrations>. The left sidebar has a red box around the 'Configuration' item (1). The main content area shows a 'Discovered' section with a single entry: '投屏电视C0' (DLNA Digital Media Renderer) with 'CONFIGURE' and 'IGNORE' buttons. To the right, a message says 'Nothing configured yet' with a note about adding the first integration. A red box surrounds the '+ ADD INTEGRATION' button at the bottom right.

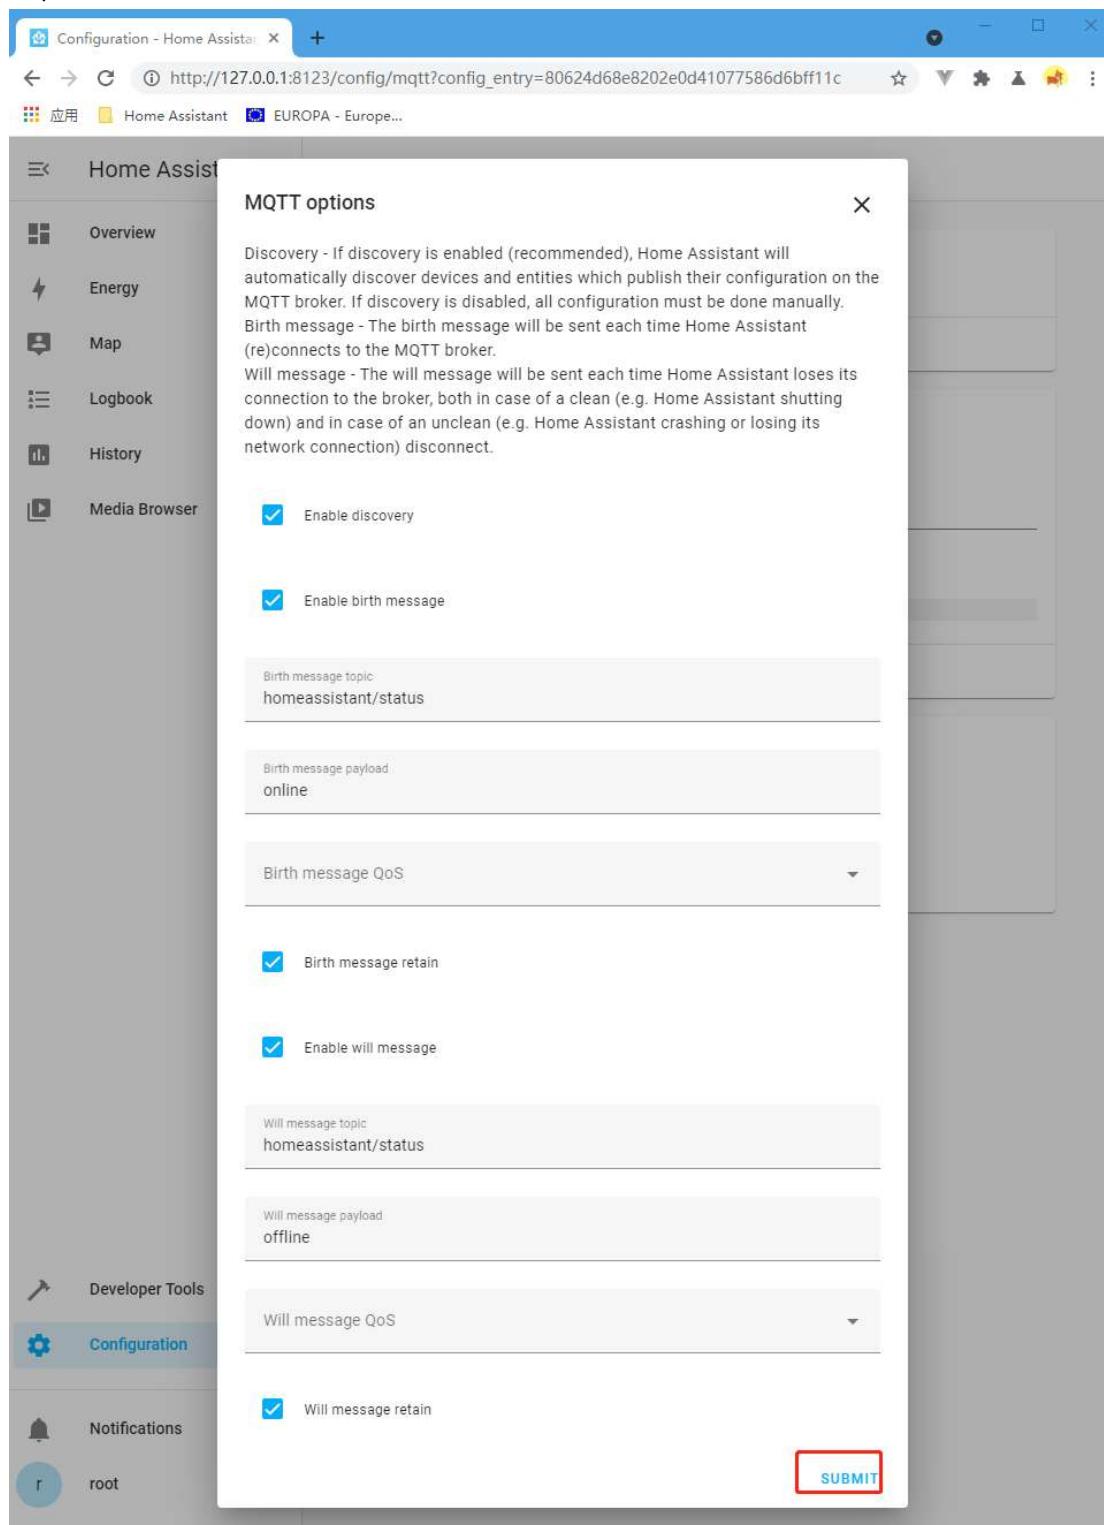

step 3

step 4

step 5

step 6

restart Home Assistant

Ctrl+C hot key to Stop Home Assistant

hass –open-ui to start Home Assistant

step 6

new Home Assistant can control relay and get input status

The screenshot shows the Home Assistant web interface with a sidebar on the left and a main content area on the right.

Left Sidebar:

- Overview - Home Assistant
- Overview (selected)
- Energy
- Map
- Logbook
- History
- Media Browser
- Developer Tools
- Configuration
- Notifications (2)
- root

Main Content Area:

A card titled "dingtian" is displayed, containing the following components:

- User:** root Unknown
- Switch:** Dingtian Ethernet Switch1, Dingtian Ethernet Switch2 (both off)
- Binary sensor:** Dingtian Ethernet Input1, Dingtian Ethernet Input2 (both off)
- Updater:** Update available

Appendix VII How to openHAB

Notice:

- 1 Close your firewall
- 2 All command and script run as root/administrator
- 3 please step by step

Step 1 config Relay board

Dingtian IOT Relay

Relay

Menu

Setting

Relay Connect

Relay CGI Test

Relay Task

Input

Input Link Relay

IP WatchDog

Reset User

To Factory

Upgrade

Reboot

Channel	Protocol	Addr	Baud	Databits	Stopbits	Parity
RS485	Modbus-RTU	1	115200bps	8bit	1bit	None
CAN	Dingtian String	1	125Kbps	Standard Frame		
UDP1	Dingtian Binary	192.168.1.9	60000	Local Port		
UDP2	Dingtian String	192.168.1.9	60001	Local Port		
TCP Server	Modbus-TCP		502	Local Port		
TCP Client	Modbus-RTU Over TCP	192.168.1.9	1883	mqtt	123	Broker Password
MQTT	MQTT	Broker Address	Broker Port	Broker Username	Broker Password	

Other

Relay Password: 0 (0~9999(0 no password))

Keep Alive Second: 30 (1~120 second(0 close))

Power Failure Recovery Relay: No

Save

Relay Test

Relay1:Off Relay2:Off

The “**192.168.1.9**” is MQTT broker IP

Step 2 Install MQTT Broker

Link step 1: Install and config Broker for details how to install MQTT Broker

Step 3 install JDK and openHAB

1 Download

JDK download link:

https://cdn.azul.com/zulu/bin/zulu11.54.25-ca-jdk11.0.14.1-win_x64.msi

OpenHAB download link:

<https://openhab.jfrog.io/artifactory/libs-release-local/org/openhab/distro/openhab/3.2.0/openhab-3.2.0.zip>

OpenHAB add-on download link:

<https://openhab.jfrog.io/artifactory/libs-release-local/org/openhab/distro/openhab-addons/3.2.0/openhab-addons-3.2.0.kar>

2 install

unpack zip directory tree as below image(Example install directory is “D:\tool\openHAB”):

Notice:

The openHAB install directory must **contain no spaces**

data (D:) > tool > openHAB			
名称	修改日期	类型	大小
openhab-3.2.0	2022-03-30 15:43	文件夹

start_debug.bat	2021-12-20 4:27	Windows 批处理...	1 KB
start_debug.sh	2021-12-20 4:27	Shell Script	1 KB

```
1 echo off
2
3 echo Launching the openHAB runtime...
4
5 setlocal
6
7 set DIRNAME=%~dp0%
8 set JAVA_HOME=D:\tool\openHAB\zulu11.54.25-ca-jdk11.0.14.1-win_x64
9
10 IF [%OPENHAB_RUNTIME%]==[] (
11     set RUNTIME=%DIRNAME%\runtime
12 ) ELSE (
13     set RUNTIME=%OPENHAB_RUNTIME%
14 )
15 "%RUNTIME%\bin\karaf.bat" &
```

4 First time init openHAB

1 double click “start.bat”

data (D:) > tool > openHAB > openhab-3.2.0			
名称	修改日期	类型	大小
addons	2022-03-31 21:05	文件夹	
conf	2022-03-31 21:06	文件夹	
runtime	2022-03-31 21:05	文件夹	
userdata	2022-04-01 16:28	文件夹	
LICENSE.TXT	2021-12-20 4:45	文本文档	14 KB
start.bat	2022-03-30 17:33	Windows 批处理...	1 KB
start.sh	2021-12-20 4:27	Shell Script	1 KB
start_debug.bat	2021-12-20 4:27	Windows 批处理...	1 KB
start_debug.sh	2021-12-20 4:27	Shell Script	1 KB

The screenshot shows a terminal window titled "管理员: Karaf". The title bar also includes "Launching the openHAB runtime...". The main area of the window displays the openHAB logo, which consists of various letters and symbols forming a word cloud-like pattern, followed by the text "3.2.0 - Release Build". Below the logo, there is a command-line interface with the following text:
Use '<tab>' for a list of available commands
and '[cmd] --help' for help on a specific command.
To exit, use '<ctrl-d>' or 'logout'.
openhab> -

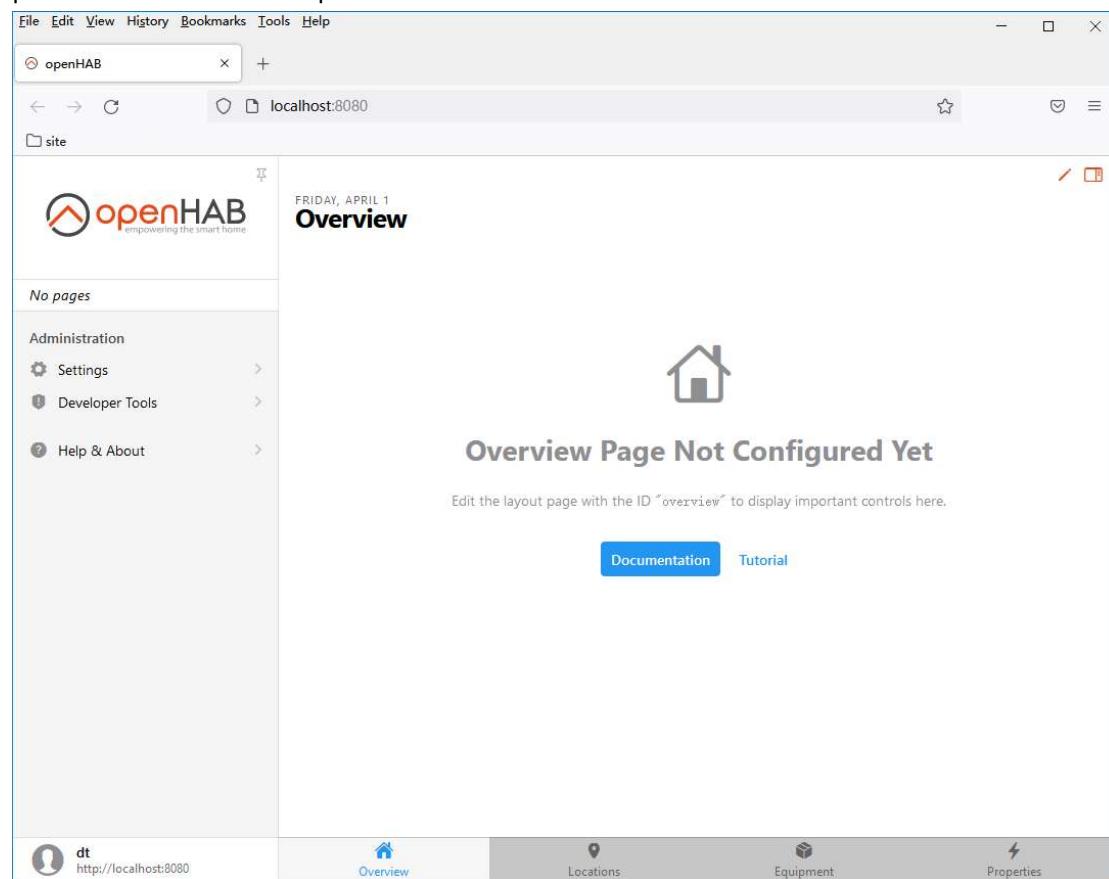

2 First time init openHAB

use Firefox open URL "<http://localhost:8080>"(my computer chromium can't open openHAB web page)

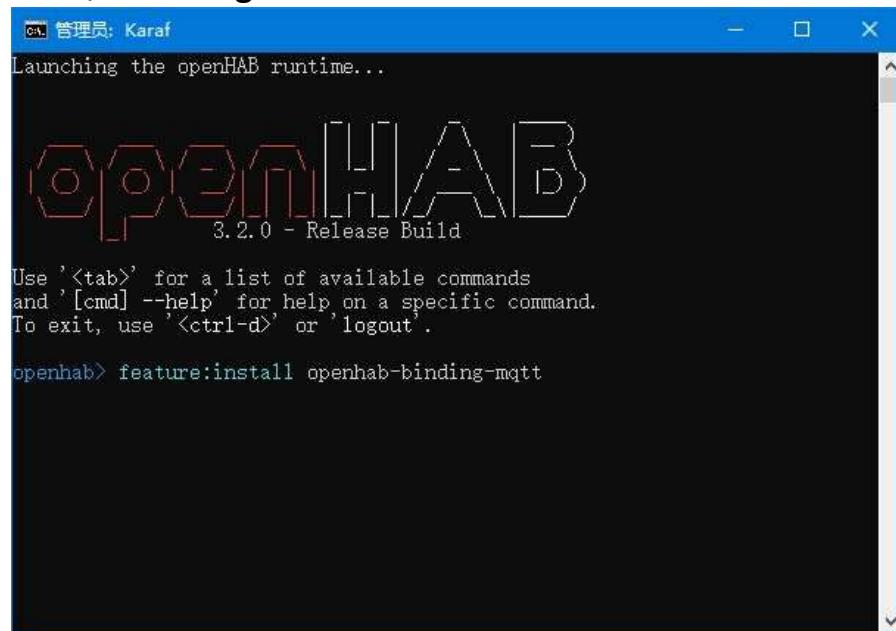

after first time config,you can get main web page like below

Notice:

please save username and password

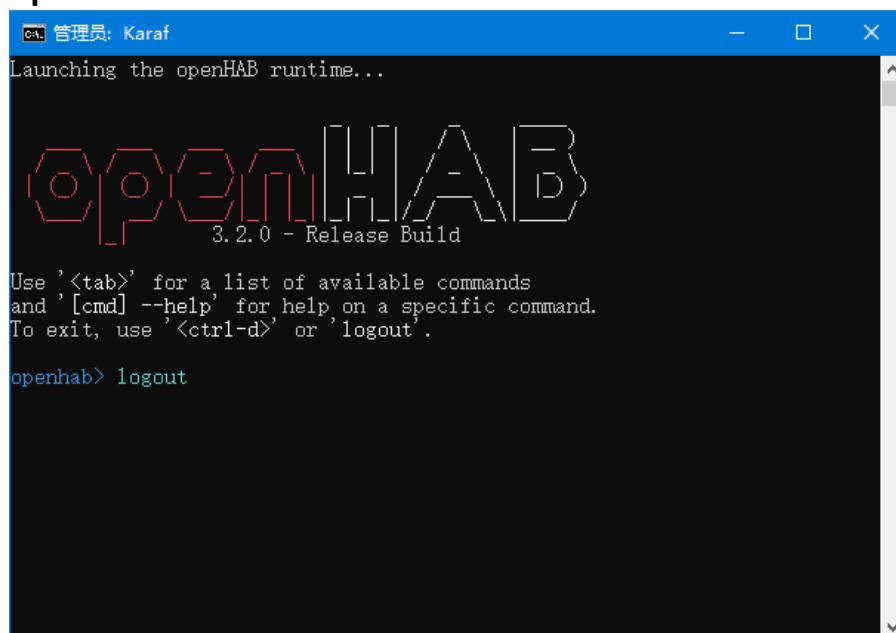

3 install MQTT-binding

```
管理员: Karaf
Launching the openHAB runtime...
[OpenHAB] 3.2.0 - Release Build
Use '<tab>' for a list of available commands
and '[cmd] --help' for help on a specific command.
To exit, use '<ctrl-d>' or 'logout'.
openhab> feature:install openhab-binding-mqtt
```

4 Stop openHAB

```
管理员: Karaf
Launching the openHAB runtime...
[OpenHAB] 3.2.0 - Release Build
Use '<tab>' for a list of available commands
and '[cmd] --help' for help on a specific command.
To exit, use '<ctrl-d>' or 'logout'.
openhab> logout
```

Step 4 Add Dingtian Relay board to openHAB

2ch_config for 2 channel relay board

4ch_config for 4 channel relay board

8ch_config for 8 channel relay board

1 Change json MQTT broker host, username,password

change file “org.openhab.core.thing.Thing.json”

```
1  {
2   "mqtt:broker:dingtianbroker": {
3     "class": "org.openhab.core.thing.internal.BridgeImpl",
4     "value": {
5       "label": "MQTT Broker",
6       "channels": [],
7       "configuration": {
8         "properties": {
9           "certificatepin": false,
10          "clientid": "ble677c2-577c-4678-86f6-5e0a060827b6",
11          "enableDiscovery": false,
12          "host": "192.168.1.9", change to you broker IP
13          "keepAlive": 60,
14          "lwtQos": 1,
15          "lwtRetain": true,
16          "password": "123", change to you broker password
17          "port": 1883,
18          "publickeypin": false,
19          "qos": 1,
20          "reconnectTime": 60000,
21          "secure": false,
22          "username": "mqtt" change to you broker username
23        },
24      },
25      "properties": {},
26      "uid": {
27        "segments": [
28          "mqtt",
29          "broker",
30          "dingtianbroker"
31        ],
32        "uid": "mqtt:broker:dingtianbroker"
33      },
34    },
35    "thingTypeUID": {
36      "segments": [
37        "mqtt",
38        "broker"
39      ],
40      "uid": "mqtt:broker"
41    }
42  },
43}
```

2 Change json SN(example SN 7920) to you relay board SN

Change file:

“org.openhab.core.thing.Thing.json”

“org.openhab.core.thing.link.ItemChannelLink.json”

“org.openhab.core.items.Item.json”

org.openhab.core.thing.Thing.json

The screenshot shows a code editor window with the title "org.openhab.core.thing.Thing.json". The main pane displays a JSON configuration file. A search and replace dialog is open over the file, with the following details:

- Find what:** 7920
- Replace with:** 1 input you relay board SN
- Search mode:** Normal
- Replace options:** Replace All (checkbox checked)
- Transparency:** On losing focus

The JSON file content includes several MQTT topics and their configurations, such as "dingtianbroker:DingtianRelay7920" and "mqtt:topic:dingtianbroker:DingtianRelay7920:R1".

```

83             }
84           }
85         }
86       ]
87     }
88   }
89 }
```

JSON file length: 16,233 lines: 605 Ln: 43 Col: 43 Sel: 4 | 1 Unix (LF) UTF-8 INS .ai

org.openhab.core.thing.link.ItemChannelLink.json

The screenshot shows a code editor window with three tabs at the top: "org.openhab.core.thing.Thing.json", "org.openhab.core.thing.link.ItemChannelLink.json", and "org.openhab.core.items.Item.json". The "ItemChannelLink.json" tab is active. A search and replace dialog is open over the code, with the following details:

- Find what:** 7920
- Replace with:** 1 input you relay board SN
- Search mode:** Normal
- Replace buttons:** Find Next, Replace, Replace All (highlighted in red)
- Advanced options:** Backward direction, Match whole word only, Match case, Wrap around, Transparency (On losing focus, Always), In selection, Replace All in All Opened Documents, Close.

The JSON code in the editor contains several entries for "DingtianRelay7920" things, each with a unique ID (I1, I2, I3, I4) and a configuration object. The configuration object includes segments for MQTT, topic, broker name, relay name, and relay ID (I1, I2, I3, I4). The "value" field for each entry is currently set to "7920".

```
1, "DingtianRelay7920I1 -\u003e mqtt:topic:dingtianbroker:DingtianRelay7920:I1": { "class": "org.openhab.core.thing.link.ItemChannelLink", "value": "7920" }, "c Replace 2, "DingtianRelay7920I2 -\u003e mqtt:topic:dingtianbroker:DingtianRelay7920:I2": { "class": "org.openhab.core.thing.link.ItemChannelLink", "value": "7920" }, "DingtianRelay7920I3 -\u003e mqtt:topic:dingtianbroker:DingtianRelay7920:I3": { "class": "org.openhab.core.thing.link.ItemChannelLink", "value": "7920" }, "DingtianRelay7920I4 -\u003e mqtt:topic:dingtianbroker:DingtianRelay7920:I4": { "class": "org.openhab.core.thing.link.ItemChannelLink", "value": "7920" }
```

At the bottom of the editor, status information is displayed: "JSON file length : 8,098 lines : 306 Ln : 2 Col : 17 Sel : 4 | 1 Unix (LF) UTF-8 INS ."

org.openhab.core.items.Item.json

The screenshot shows a code editor interface with three tabs at the top: "org.openhab.core.thing.Thing.json", "org.openhab.core.thing.link.ItemChannelLink.json", and "org.openhab.core.items.Item.json". The "org.openhab.core.items.Item.json" tab is active. A search dialog is open over the code area, with the following details:

- Find what:** 7920
- Replace with:** 1 input you relay board SN
- Search mode:** Normal
- Replace options:**
 - Backward direction
 - Match whole word only
 - Match case
 - Wrap around
- Transparency:**
 - On losing focus
 - Always

The code editor displays a JSON object with multiple items, each representing a relay. The "label" field for the first item is being modified from "DingtianRelay7920-I1" to "1 input you relay board SN".

```
1, "t": {"DingtianRelay7920I1": { "class": "org.openhab.core.items.ManagedItemProvider$PersistedItem", "value": { "g": Replace, "i": "7920", "c": "1 input you relay board SN", "t": "Replace", "Find Next": "Find Next", "Replace": "Replace", "Replace All": "Replace All 2", "In selection": "In selection", "Replace All in All Opened Documents": "Replace All in All Opened Documents", "Close": "Close", "Backward direction": true, "Match whole word only": false, "Match case": false, "Wrap around": true, "Search mode": "Normal", "Extended (\n, \r, \t, \b, \x...)": false, "Regular expression": false, "matches newline": false, "Transparency": "Always" } } }, "DingtianRelay7920I2": { "class": "org.openhab.core.items.ManagedItemProvider$PersistedItem", "value": { "groupNames": [], "itemType": "Switch", "tags": [ "Point" ], "label": "DingtianRelay7920-I2", "category": "" } }, "DingtianRelay7920I3": { "class": "org.openhab.core.items.ManagedItemProvider$PersistedItem", "value": { "groupNames": [], "itemType": "Switch", "tags": [ "Point" ], "label": "DingtianRelay7920-I3", "category": "" } }, "DingtianRelay7920I4": { "class": "org.openhab.core.items.ManagedItemProvider$PersistedItem", "value": { "groupNames": [], "itemType": "Switch", "tags": [ "Point" ], "label": "DingtianRelay7920-I4", "category": "" } }, "DingtianRelay7920I5": { "class": "org.openhab.core.items.ManagedItemProvider$PersistedItem", "value": { "groupNames": [], "itemType": "Switch", "tags": [ "Point" ], "label": "DingtianRelay7920-I5", "category": "" } }, "DingtianRelay7920I6": { "class": "org.openhab.core.items.ManagedItemProvider$PersistedItem", "value": { "groupNames": [], "itemType": "Switch", "tags": [ "Point" ], "label": "DingtianRelay7920-I6", "category": "" } }
```

At the bottom of the editor, status information is displayed: "JSON file", "length : 4,466", "lines : 194", "Ln : 2", "Col : 17", "Sel : 4 | 1", "Unix (LF)", "UTF-8", and "INS".

3 Cover openHAB json

Launching the openHAB runtime...
[openHAB logo] 3.2.0 - Release Build
Use '<tab>' for a list of available commands
and '[cmd] --help' for help on a specific command.
To exit, use '<ctrl-d>' or 'logout'.
openhab> -

Wait 1 minute for openHAB startup

2 Open openHAB web page

It shows MQTT broker and Relay board 7920 is online

The screenshot shows the openHAB web interface at `localhost:8080/settings/things/`. The left sidebar menu is visible with options like Administration, Settings, Things, Model, Items, Pages, Rules, Scripts, Schedule, Developer Tools, and Help & About. The main content area is titled "Things" and shows a list of "2 things". The list includes "MQTT Broker" (bind: mqtt:broker:dingtianbroker) and "Relay7920" (bind: mqtt:topic:dingtianbroker:DingtianRelay7920). Both items are marked as "ONLINE". A search bar at the top of the list allows filtering by "Alphabetical" or "By binding". A blue "+" button is located in the bottom right corner of the main content area.
